

Computer Lab Commandments

St. Androids hard at work in the computer lab

BY REGINA T. HARRINGTON

If you have not had time to enjoy the advantages of the St. Andrews College Network, which now includes E-Mail access, then you are one of the few. The majority of students consider the opportunity to utilize the network as a definite advantage. However, there are some specific points that every student should keep in mind.

St. Andrews is responsible for maintaining and providing access to the Computer Network and College-owned computer equipment for the use of the College Community. They are not directly responsible for user files inadvertently lost or damaged. This is the user's own responsibility. Thus, the user is encouraged to properly format and make one or more backups of important files on personal discs.

Speaking of personal, St. Andrews is also not responsible for providing a system that allows users to store "confidential" infor-

mation and insights into your personal psyche off the College Network. From time to time it may be necessary for Computer Services personnel to view the contents of files. If the file violates College policy, the user could be penalized. Also, Messages sent on PEGASUS Mail can be viewed and the sender tracked down. If the messages are viewed by the Director of Computer Services as in violation of College Policy (harassment, sexually explicit, etc.), the user could lose his or her computer privileges. Keep in mind that the user is responsible for any actions taken under his or her password. Keep your password private and change it periodically. Using the College Network involves just a little bit of basic common sense. Audible socializing should be limited in the Computer Labs. Take time out to dispose of your own trash and mind your manners. Don't expect the Computer Services

Staff and work-study students to play parent. Each user is responsible for his or her own data, books, printouts, etc... To answer a few of the most asked questions: Guest accounts are limited to the Liberal Arts Building, Lab B from now on (take time to read the LOG ON remarks). No, you cannot use the LaserJet Printer in the Detamble Computer Lab. Check to make sure that you are connected to the printer in which you wish to print to before you complain about the printer not working.

Tell friends and family to type (YOUR USER NAME) @tartan.sapc.edu (completely in lower case letters) if they want to send you a message on E-Mail. Do not bother to ask about when in-room modem access for the network can be expected -- it has not been determined as of yet.

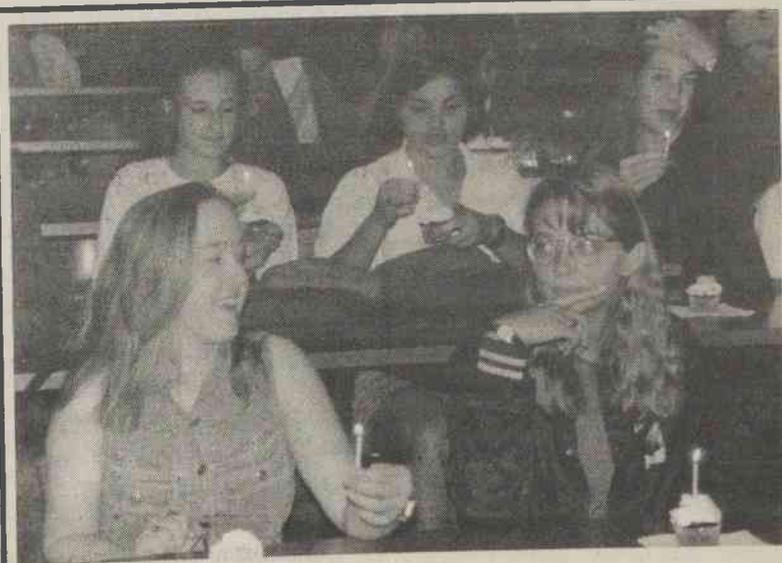

The Computer Services Staff is hard at work and the work-study students are in the Labs for extra aid when the need arises.

Pay attention to the **POLICY ON USE OF COMPUTERS, SOFTWARE, AND COLLEGE NETWORKS** which should be visibly posted in each Lab. Have fun and take the opportunity to utilize the network and enjoy the St. Andrews advantage.

Why not spend Winter Term in...

Korea?

And who better than Howard Reichner to show you the way? You'll spend 2 nights in Seoul and interact with other Korean students. (Cost: somewhere between \$1,200 and \$1,500.) For the time of your life, it's a bargain!

Sara Griffit (right) and Sue Lewke and the rest of the SAGE 105 class enjoy a plenary on the anniversary of St. Andrews. Students watched old promotional videos from the early days of St. Andrews.
