

The following letter of appreciation from the United States Military Academy has been received by President J. H. Millis. Our Southern Die Casting and Engineering Division has had many requests recently from foreign countries for information concerning "VIBROCAST."

DEPARTMENT OF PHYSICS AND CHEMISTRY  
UNITED STATES MILITARY ACADEMY  
WEST POINT, NEW YORK

MADN-H

8 June 1961

SUBJECT: Letter of Appreciation

TO: President  
Adams-Millis Corporation  
High Point, North Carolina

1. On 27 and 29 May Captain K. J. Coffman of this Department presented a lecture to the cadets of the Third Class (sophomore) on future trends in Inorganic Chemistry in which he discussed the revolutionary, ultrasonic die-casting process "VIBROCAST" developed by The Southern Die Casting and Engineering Company. As part of his presentation, Captain Coffman displayed actual castings which were sent to us by your subsidiary. This portion of the lecture was met with considerable interest, and numerous questions were asked following the presentation.

2. I should like to call your attention to the prompt and gracious assistance given to us by Mr. John A. Weber, the Vice-President of The Southern Die Casting and Engineering Company. Mr. Weber's quick response to our request for information concerning "VIBROCAST" resulted in our receiving the excellent samples and explanatory material in time to incorporate them as a major part of the lecture. Would you kindly express my profound appreciation to Mr. Weber and his associates for their help.

FOR THE HEAD OF THE DEPARTMENT:

*C. H. Wood*

C. H. WOOD  
Colonel, CmlC  
Associate Professor of Chemistry

WEDDING RING: "One-Man Band"
