Ladders can be dangerous and should be used with care. Make sure someone is with you to hold the ladder and if you are not sure about the safety of the ladder, don't go up the ladder. Particular attention should be called to the so-called "A" ladder. At best these will shake some and if you are not accustomed to the "A" ladder, get the conventional straight ladder. One of our fireman had the misfortune of breaking his foot when he jumped from an "A" ladder he thought was going to fall with him.
