

Mrs. Carol Rosenberg, instructor in the In-teaching Program, is shown with a group of patient-students. A story on this program appears on another page in this issue of InterCom.

Dr. George Wilbanks conducts one of the instructional programs held in the Pre-Natal Clinic for parents-to-be. Sound track purchased with Auxiliary funds will make this teaching program more effective.

## Auxiliary Projects

The Duke Hospital Auxiliary believes its true "excuse for being" is to render service. Only secondarily should its efforts go to fund raising. As Auxiliary activity has grown, however, its income producing ability has increased without detriment to the service aspect of Auxiliary work. This year the Auxiliary is able to allocate \$10,000 for the support of seven hospital projects:

Purchase of an Aquamatic Thermal Unit

Purchase of a TV set for the Clinical Research Unit

Purchase of equipment and supplies for the In-Teaching Program

Purchase of sound track for Pre-Natal Clinic teaching program

Contribution to the Florence K. Wilson Nursing Scholarship Fund

Contribution to the hospital Chapel Fund

Redecoration of the hospital Lobby

Joanne Douglas, R. N., nurse in the new Clinical Research Unit helps a patient adjust the television set.

Purchase of an Aquamatic Thermal Unit will make it possible to eliminate this cumbersome, ice-packed bed. The new unit is a plastic sheet through which water can be circulated. The sheet can be wrapped around the patient, and the temperature of the water regulated to raise or lower the patient's body temperature.
