

Drs. Renkin and Boyarsky Appointed

DR. EUGENE M. RENKIN

DR. SAUL BOYARSKY

Appointment of two new professors to the Medical Center faculty has been announced. Dr. Eugene M. Renkin has joined the faculty as professor of pharmacology, and Dr. Saul Boyarsky has been appointed professor of urology and assistant professor of physiology.

Dr. Renkin was professor and chairman of the physiology department of the George Washington University, Washington, D. C., before coming to Duke, where he heads the newly established pharmacology division of the department of physiology and pharmacology. He has conducted extensive research concerned with control of the body's circulatory system. A native of Boston, Massachusetts, he received his M.S. degree from Tufts College and his Ph.D. degree from Harvard University. He was associated with the Brookhaven National Laboratory and the National Heart Institute before joining the George Washington faculty in 1957.

Dr. Boyarsky is chief of urology at the Veterans Administration Hospital here as well as a professor of urology at Duke. Before coming to Durham he was an associate professor of urology at the Albert Einstein College of Medicine, New York City.

Born in Burlington, Vermont, Dr. Boyarsky received his M.D. degree from the University of Vermont, interned at Johns Hopkins Hospital, and took his residency training in urology at Duke. He was associated with the New York University College of Medicine before joining the Albert Einstein faculty in 1956.

Dr. Wyngaarden Off to Paris

Dr. James B. Wyngaarden left Duke in August, on leave of absence, to spend a year as a guest scientist at the Pasteur and Curie Institutes in Paris, world renowned centers for research in genetic mechanisms. He will work in the field of fundamental genetics with members of the Institutes' permanent staffs and several other American scientists selected on the basis of their achievements and re-

search interests. His research will be concerned with mechanisms that regulate the use of hereditary information in the manufacture of proteins within cells.

Dr. Wyngaarden will visit, also, a number of medical centers to observe research activities and various aspects of medical education. He is accompanied by his family.

This 'n' That

NEW ARRIVALS

Mrs. Rose Hagan, surgery, a son, August 30.

Sarah and Harold F. Ladd, hospital business office, a son, Harold Frederick, Jr., August 13.
