

Coming in the Fall: the first of a new campus

Pictured above is the architectural rendering of the Medical Sciences Building I. This building, which will be the first part of the new Medical Center campus, will be located opposite the present Army Ordnance Research Building, near the old laundry. It will house Biochemistry and Genetics and Physiology and Pharmacology. As plans now stand, the construction of Medical Sciences Building I will begin in the winter of 1965. (E. The New Curriculum: "...a pioneering approach to medical education."

by WES LEFLER

The Duke University Medical Center has received a \$750,000 grant from the Commonwealth Fund of New York to help finance a pioneering approach to medical education.

The new project will involve a drastic revision of current medical teaching techniques and medical curricula.

Announcement of the grant was made by Dr. Douglas M. Knight, president of Duke University.

"It is our hope that medical education nationally will benefit from the experience gained by your school in adopting this new curriculum," said Quigg Newton, president of the Commonwealth Fund, in notifying Duke officials of the award.

The Duke program will involve the first major change in medical school curricula in the past 50 years, according to Dr. William G. Anlyan, dean of the Duke School of Medicine.

He said that the objective of this new concept will be to turn out more

doctors who are better trained to bring directly to the American public the benefits of the massive amount of medical knowledge now available.

The new curriculum is scheduled to be implemented in the first year class of 1966. The changeover is expected to be complete by 1970.

Dr. Anlyan said the grant from the Commonwealth Fund will be used to acquire the faculty members needed to launch the new program.
