

PHOTOGRAPH OF PHOTOGRAPHERS—Sam Agnello (right), director of audiovisual education, and Wayne Williams, coordinator of medical photography, discuss the medical photographers conference held here.

Medical Photographers Hold Conference at Duke

Almost everyone today takes pictures. Whether he steadies a Brownie and flips one lever or uses special film, expensive lenses, light meters and a sophisticated camera with multiple adjustments, the picture he takes is his own product.

But of the millions of camera bugs,

Duke

(continued from page one)

A special air conditioning system along with carefully planned fume exhaust units have been installed. A motor generating facility can provide emergency power if necessary.

The center was funded through contributions from the Nanaline H. Duke Foundation, the Duke Endowment and Burlington Industries, along with a \$2.9 million grant from the National Institutes of Health and money from the Duke Medical Center building fund.

Following dedication ceremonies, students and members of the staff will direct tours of the new facility.

one of the most select groups among the professionals is that made up of the medical and biological photographers. They see and photograph a world foreign to most of society through their lenses.

In late November and early December, the medical center played host to a group of these professionals—members of the Southeastern Chapter of the Biological Photographers Association—from medical centers, hospitals and universities in seven southeastern states.

Wayne C. Williams, coordinator of medical photography here, is chairman of the regional chapter, and Sam Agnello, director of audiovisual education, served as convener for the meeting.

The Biological Photographers Association is an international organization of about 1,000 members. The approximately 60 who met at Duke exchanged ideas and information ranging from concepts of photography to technical procedures.

The photographers, mostly from hospitals and medical centers, came from Virginia, North and South Carolina, Georgia, Florida, Alabama and Tennessee.

Glenn Home,¹¹ Gets Award

When Dr. James Glenn returned from a medical mission to South Vietnam Dec. 4, he had an award waiting for him in Buffalo, N. Y.

Dr. Glenn, chief of urologic surgery at Duke, has been named "Urologist of the Year" by the Buffalo Urological Society and received a plaque in ceremonies there Dec. 5.

The Buffalo society annually recognizes "an outstanding physician who has made major contributions to the field of urology." Dr. Glenn earned his bachelor's degree at nearby University of Rochester and received his M.D. at Duke in 1952. He has been professor of urology and chief of the service here since 1963. The trip initially was scheduled earlier in the year, but had to be postponed because of intensive warfare in and around Saigon.

The United States is attempting to aid medical education in South Vietnam, and a proposed program would bring selected medical graduates and faculty members to medical centers in this country to observe methods of clinical practice, research, teaching and administration.

Dr. Glenn's role is to assess the feasibility of an overall program and report his findings to the A.M.A. and the State Department.

COMMENTS

(continued from page ten)

Unit Administration

Mr. and Mrs. Douglas Mack are the parents of a son born Nov. 8. Mrs. Mack is a ward clerk on Cushing

Urology

Mr. and Mrs. James E. Perry, Jr., are the parents of twin boy and girl born Oct. 23. Mrs. Perry is an R. N. in the urology clinic . . . Dr. and Mrs. Hak Lim Kim announce the birth of a daughter on Nov. 14. Dr. Kim is a postresidency fellow in urology . . . Mrs. Caron Beatty is a new secretary to Dr. Joseph M. Malin replacing Mrs. Joyce Whitten . . . Miss Jean Newton is a new X-ray technician in the urology clinic

Veterinary Medicine

Mr. and Mrs. David Laws announce the birth of a daughter, Pamela Kay, on Aug. 23
