

Med Center Growth

(continued from page one)

Sealevel Hospital

Mr. D. E. Taylor, a native of Sealevel, N. C., his father and brothers made the 90-bed Sealevel Hospital in Carteret County a part of Duke University's medical facilities at mid-year.

The \$2.7 million gift from Mr. Taylor will provide advantages for both Duke and Sealevel.

Long-range plans for the community hospital envision its development as "a strong, semi-autonomous satellite of the Duke University Medical Center, gradually evolving as a true medical center in its own right."

New Facilities

The George Garland Allen Memorial Chapel, located near the main lobby on the first floor of the hospital, was dedicated in memory of a former chairman of the Duke Endowment trustees during Medical Alumni Weekend.

The chapel, a long-awaited addition to the Medical Center, is open to all patients, visitors, and employees at all times. Formal prayer services are held several times each day.

Also dedicated during alumni weekend was the F. G. Hall Environmental Laboratory, formerly known as the hyperbaric chambers. The late Dr. Hall was chairman of the Duke Department of Physiology from 1949 to 1961.

Three of four buildings in the Research Park complex opened their doors in 1969 and construction was begun on the fourth. The non-permanent buildings will provide necessary research space until permanent structures are someday built on the site.

The three completed buildings of Research Park house projects in the Department of Medicine, in cardiovascular core research, biomedical engineering, immunology, and organ transplantation. The fourth building will be used by the departments of pediatrics and microbiology and immunology.

Work also was begun in 1969 on the new vivarium, Duke's central animal care and research facility. The \$1.9 million structure, located on Science Drive across from the Nanaline H. Duke Building, will house most of the animals used for research at the Medical Center. It is scheduled for completion in November of this year.

Health Affairs Vice-Presidency

In June of 1969, the University announced it had created a vice-presidency

for health affairs and appointed Dr. William G. Anlyan to the position. Dr. Anlyan, a professor of surgery, had formerly been dean of the School of Medicine and associate provost for medical affairs.

In his new role, Dr. Anlyan became responsible for the affairs of the entire Medical Center, including the schools of medicine and nursing, Duke Hospital, and the allied health professions. He is in charge of the operational and financial aspects of education, research and patient care within the Medical Center and provides supervision for all Duke's cooperative ventures with other hospitals.

In another administrative change announced in September, Dr. Thomas D. Kinney, chairman of the Department of Pathology, was named director of medical education. With this appointment, Duke abolished the title of dean of the School of Medicine. The changes, which also affected the titles of the former associate and assistant deans, were recommended by a committee on administrative reorganization set up in 1968.

DR. ANLYAN

Unit Administration

To keep up with the fast-growing pace of medical care, Duke instituted a new system of ward administration in late 1969. It's called the unit system and it means that the hospital has been divided into sections according to medical specialty and a person has been designated to serve as administrator of each unit.

The program, which is being phased in over a 12-month period, developed out of a pilot project begun in 1966. Presently six men, Ned Kearns, Jim Daniel, Jim Carter, Russ Gullixson, Lin Bentel, and John Kernodle, are serving as unit administrators at Duke.

They have been called administrators of "hospitals within a hospital" and their role has been described as "administration where the action is."

MR. McCAULEY

MR. STEINERT

MR. SMITH

MR. AYLOR

MR. PECK

MR. HOLT

Hospital Administration

In January of 1969, C. Edward McCauley was promoted to a newly created post as associate director of Duke Hospital. He had formerly been assistant director.

Also appointed to the staff of Hospital Director Stuart M. Sessoms were four new assistant directors. They include S. Douglas Smith, formerly administrative assistant to Dr. William G. Anlyan, who was appointed in February, Oscar R. Aylor, a recent graduate of the University of Alabama graduate program in hospital administration, who joined the staff in September, and Richard Peck and Kenneth Holt, both of whom became assistant directors in November. Mr. Holt was formerly assistant director at Watts Hospital and Mr. Peck came to Duke from a post with the University Hospitals of Cleveland, Ohio.

Another new face in the hospital administration area is Jeff H. Steinert, appointed assistant vice-president for business and finance at the Medical Center in April, 1969. He was formerly director of management services for the Greenville (S. C.) Hospital System.
