Grzelecki, Klima Appointed

Two New Assistant Directors at Work

MR. GRZELECKI

MR. KLIMA

Duke Hospital has named two new assistant directors.

Appointed were Alfred J. Grzelecki, now responsible for a number of service departments within the Hospital, and Dennis E. Klima, who takes administrative responsibility for the construction and development of systems for Duke's new \$3.7 million Eye Center.

Both appointments, finalized late last month, were announced by Associate Hospital Director Richard H. Peck.

Mr. Grzelecki, a 1967 graduate of Duke's master's degree program in hospital administration, comes back to Duke from four years with the U. S. Air Force Medical Service Corps. He served in several positions including assistant administrator for resources management at the 401 Tactical Hospital, a 115-bed regional medical center in Madrid, Spain.

A native of Schenectady, N. Y., Mr. Grzelecki earned a B. A. degree in economics from Colby College in Waterville, Me., in 1965. He is married to the former Margaret Baker of Brevard, N. C., and they are the parents of a daughter, Ann Sheaffer.

His areas of responsibility include central supply, dietetics, pharmacy, equipment room, purchasing, and the storeroom.

Mr. Klima, who was on the Duke staff for several months following his graduation from the Duke HA program in 1968, also comes back to Duke from the service.

He recently completed three years of active duty with the Health Care Administration Section of the U. S. Navy's Medical Service Corps. He served at both Bethesda Naval Hospital in Maryland and with the Bureau of Medicine and Surgery in Washington, D.C.

New Aging Program Announced This Week

OARS has come to Duke.

OARS, officially called the Older Americans' Resources and Services Program, has been established at Duke under a grant from the government Administration on Aging to provide more services for the elderly.

The program, announced this week by U. S. Commissioner on Aging John B. Martin at a talk here, will operate as part of Duke's Center for the Study of Aging and Human Development.

Dr. Carl Eisdorfer, professor of psychiatry and director of the center, explained that underlying the program is the philosophy that many factors contribute to an individual's adaptation to later life and that assistance at critical times may help prevent the development of more serious problems.

"Accordingly," Dr. Eisdorfer explained, "the new program will seek to develop a variety of services to help persons remain active in the community, including social work services, psychiatric and psychological counseling, pastoral care, and referral to legal and financial resources, as well as services to the home."

Dr. Eric Pfeiffer, associate professor of psychiatry, will head the project, and Dr. Eisdorfer and Dr. George Maddox, program director for the center, will be the principal investigators.

Other members of the OARS team include Dr. Daniel Peak, administrator of the Duke Information and Counseling Service for Older Persons upon which OARS will build, and Mrs. Carol Pauk, who will serve as project coordinator.
