The Freshmen are going to organize. Sympathy to the Sophs.

We lost two games last weekend, but if we win one this week we are ahead of the game.

Freshmen are requested to wear their other faces to the Hallowe'en party.

Examinations are only a few weeks off. Study. "Eventually, why not now?"

FRESHMEN CLASS

Some time during next week the class of 1929, will organize. The whole school looks forward to that event, because the whole student body has, at some time or other, gone through the same thing. Organizing your class for the first time, in college, is an event to look forward to, an event to be proud of, an event that deserves your most loyal support and our deepest consideration.

The other three classes have had their troubles, factions have arisen, which have at times interfered with the workings of the classes; but the new class has before it the opportunity to have a class without factions and without dissension. Take advantage of it. When your vote is cast, on any problem, have your class and your school in mind. Always let first things come first and your class will have a successful journey through its four years of existence.

The members of the three upper classes are looking toward the class of 1929 hopefully. They believe in you. It is up to each individual of the class to make a resolve with himself, to always cast his vote for that thing which will best serve the interest of his class.

CLIO'S ELECT OFFICERS AT REGULAR MEETING

Brief and Varied Program Follows
Business Session. Richardson
Best on Program.

The Clio Literary Society, at the regular session last Tuesday evening in the society hall, elected its officers for the second quarter of the school year. Mr. Colclough was elected president and Mr. Richardson was chosen as vice-president by the society, both men being efficient and active in their work in the society. For the position of secretary, Mr. J. D. Gorrell was elected; as treasurer, Mr. J. L. Lynch; first censor, Mr. E. C. Brady and second censor, Mr. W. L. McLeod. Mr. E. L. Roberson and Mr. R. E. Brittle were elected as critics, and Mr. L. T. McLeod as chaplain. With these men in office, it is certain that the good work of the society will go forward

as it has heretofore under the direction of their predecessors.

After the election of officers and the regular business session a short literary program was given. The first speaker, Mr. J. V. Burgess, told some of the peculiarities of that section of western Arizona known as the Rocky Mountain Pineplain. Mr. Burgess gave an excellent description of the topography of the country, its plateaus and mountain ranges.

Mr. Marvin Sexton then entertained the society with a piano solo.

Mr. W. Griffin talked on the topic, "Why the United States Navy?", explaining the importance of the navy in protecting Americans in foreign countries if need be, in protecting American merchantmen on the seas, and as a protection against invading enemies.

"Are Women a Failure in Politics?" was the subject treated of by Mr. H. Richardson. Mr. Richardson presented the views of a Miss Blair, a politician, on the question to prove that although women have not revolutionized politics as it was at first thought they would, they have not been a failure in politics and that their influence toward the betterment of political conditions would be felt gradually.

The judges' decision gave to Mr. Richardson the place of the best speaker on the program. Mr. J. V. Burgess was given honorable mention.

Where there is a will, there are a hundred ways to score.

IMPRESSIONS

Gladys Yates—Banyon trees. English poetry. Sandals. Row boats.

Ferry Lee Gibbs—Mighty Lak' a Rose. Ripening corn. Paper, mister.

Ola King Cowing—An old-fashioned garden. Suppressed sighs. Opals.

Lem Harrell—Hamlet. Gold dust. Chocolate fudge. I wonder why the stars shine.

Annie Simpson—Lilies of the Valley. Rainbows. Bubbling fountains in Switzerland.

Darden Jones—King Goldemar. Loaded dice. Iron gray mule. Stolen fruit.

Agnes Judd—Go and call the cattle home. Winner of races. Syrup queen. Pansies.

Floyd Ballard—Mother's pet. Frogs in a mill pond. Honeysuckles.

Sarah Deaton—Dandelions. Ice cream. Naomi. Dreams.

Flossie McLeod—Tea is served. Praying mandid. Hop-Scotch. Stick candy.

Julia Clem—Pork and Beans. Scotland is burning. Star-gazer.

Margaret Thomas—Blue jays. Trail-ing arbutus. Soul of a violin.

Hamp Byerly—Prince of Wales. South African lion hunts. Lawn tennis. Oil paintings.

By THE IMPRESSED.

Don't flinch, don't foul, and hit the line hard.

Student Forum

Since the opening of school there has been much said, among the students, about being dissatisfied with conditions here, this year. Now, this is a normal student body and we have an administrative force about equal to any that will be found in a school of this size. Consequently we feel that there should be some means of settling any causes of friction that might exist here.

We are herewith offering the students a medium, through which they may "air out" any difference, which they may have with the administration, the faculty, or the student governing bodies, real or imagined. If you know of something which you think is causing friction, in the school, write it up and hand it to the editor. Be sure that it is sensible and that it really amounts to something. Your name will not be used in connection with the article, if you so desire.

Be fair. Don't grumble to your schoolmate, your friend, or your roommate about something that is bothering you, but tell it to the whole school and probably, if you can show reason for the condition being changed, it will be changed.

"Speak now, or forever hold your peace."

In an isolated region, almost inaccessible in winter, this 6500 h.p. hydro-electric plant located on the Deerfield River in New England, starts, protects, and stops itself.

A Self-Starting Power Plant

Dawn—the slumbering city awakens and calls for electric current. Many miles away the call is answered. A penstock opens automatically, releasing impounded waters; a water turbine goes to work, driving a generator; and electric current is soon flowing through wires over the many miles to the city. This plant starts and runs itself.

Power plants with automatic control are now installed on isolated mountain streams. Starting and stopping, generating to a set capacity, shutting down for hot bearings and windings, gauging available water supply, they run themselves with uncanny precision.

Thus another milestone has been reached in the generation of electric power. And with present-day achievements in power transmission, electricity generated anywhere may be applied everywhere.

The non-technical graduate need not know where electricity comes from—nor even how it works. But he should know what electricity can do for him no matter what vocation he selects.

The General Electric Company has developed generating and transmitting equipment step by step with the demand for electric power. Already electricity at 220,000 volts is transmitted over a distance of 270 miles. And G-E engineers, ever looking forward, are now experimenting with voltages exceeding a million.

A new series of G-E advertisements showing what electricity is doing in many fields will be sent on request. Ask for booklet GEK-1.
