

Congratulations To Faculty Sires

New Cars Bask In Sun

Congratulations are in order to many members of the college faculty. Apparently this has been a very prosperous year for the propounders of knowledge, for over half of this number have had new additions to their families.

Among the group to be congratulated are Dean and Mrs. Mesick, Dr. and Mrs. Collins, Prof. and Mrs. Howell, Mr. and Mrs. A. T. West, and even (please sir) Dr. Clark. Now who would have thought it of Dr. Clark? And a new Packard at that! Yes sir, he's a car owner of the highest rank. Profs. Dickinson and Stewart are sporting new Dodge coupes, while Prof. Moore rolls around in a new Hudson 112. Remember Miss Howard's little "Chevy"? This year she changed her mind and became the proud owner of a Plymouth.

Wonders of wanderers, Mrs. Johnson, who won't let anyone get ahead of her, is planning to trade in "Old Ironsides" on some new model. There is much speculation in the air as to which is the best looking car salesman that Mrs. Johnson has been seen riding with. That Oldsmobile man, especially when riding in that "glorious" new convertible coupe, has his points. However, the stately gentleman who brought the Packard sedan out is hard to beat. This "event" is being anticipated with a great deal of interest, so may the best man (car?) win!

List'nin'

The change of time on the big broadcasting systems have the majority of us somewhat befuddled as to when our favorite program comes on the air, but we have a few general dates that big orchestras will be playing in the immediate future.

Paul Whiteman will be playing at Duke University on May 13 and 14. Three performances daily... Gene Krupa opens with his hand at Atlantic City this month and, it is rumored, is getting \$250 advance royalty on each wax plate he makes for Brunswick... Freddy Martin debuts at the Cocomat Grove in Los Angeles this month... Leo Reisman is at the Waldorf again for the summer... Paul Whiteman will also play for the "Ball of Tomorrow" at the World's Fair in '39... Our vote for sweet music goes to Tommy Dorsey and Wayne King... Some swing fanatics may call "The Waltz King" "corney" or "on the cob" but we still insist it is mighty sweet music... Seems a pity that Jan Garber, Glen Gray, and Ted Weems, as well as Wayne King, aren't getting the following they are entitled to.

Journalism

(Continued from page 3)

thing goes. Of course most of them are on the "up and up", but being in some cases directly connected with politics and the underworld, crookedness is sure to exist.

The would-be journalist must not get the idea that his life will be spent watching free ball games, enjoying the company of society "debs" at swell parties, or merely hanging around a police court. There is another side to his day's work back at the desk.

There is no room for the shiftless fortune seeker, or the illiterate. Only the man or woman who enjoys the hum of a busy office, the gathering of the daily doings of people, the sensation of being the first to get there, and thrill of reading a sheet of printed matter that comes from his own pencil, and it must be prolific, should even consider joining the throngs, who call themselves newspapermen and journalists.

Textile Industry

Although there is no set standard, employers favor college men and women for textile work. This work is primarily routine, but intelligence is required to operate the machinery efficiently.

In this section of the country full-fashioned hosiery and cotton textiles head production lists. Half hose, rayon, and other textiles have very important industries, also. Of these, full-fashioned hosiery offers the greatest opportunity for the college graduate. Average knitters and topers working 40 hours per week average from \$35 to \$45 weekly. The mechanics in most plants earn \$60 per week and foremen about \$100. The mechanics and foremen are usually selected from the workmen in the plant and given special training by the employers.

Women working as loopers and topers earn from \$18 to \$30 weekly for 30 hours of work.

Jobs in other departments of hosiery mills range lower than in full-fashioned, but in very few cases are lower than \$18 weekly for men and \$12 for women.

In the textile mills the wage range is comparable to those received in hosiery mills, and in the case of exceptional weavers, range from \$60 to \$100 weekly.

However, the textile market fluctuates more frequently than the hosiery market, and the possibility for steady work is not as definite. Another determining factor in this field is the type of machinery used. One would be wise to choose the newer types of machinery and plants.

Engineering

Due to the large development that is being made in science today, good engineers are needed in most fields, although the field of civil engineering is at present overcrowded. Electrical engineering has been greatly stimulated by the large expansion in rural electrification. In the mechanical engineering field the Diesel motor is being perfected. It is replacing the gas motor very rapidly, because of its low cost of operation. There should be many openings in this field for young engineers. Television is the next thing in radio, and just as soon as the sale of radios begins to decrease television will be put on the market. Diesel engineering, television, and air conditioning are the three fields that are open, and in which much progress will be made in the next few years.

In the past, air conditioning has been installed largely because it pays. The future will see the development of the application for personal comfort, health, and sustained efficiency in private offices and particularly in homes.

While theaters and stores first introduced air conditioning favorable to the public, the standardization of air conditioning on railroads has been even more impressive as a means of producing public acceptance. When persons ride on air-conditioned trains, work in air-conditioned stores, eat in air-conditioned restaurants, and relax in air-conditioned theaters, they are naturally not going to be satisfied until they have air-conditioned homes.

Golembek Again Takes Golden Gloves Match

Joe Golembek entered another Golden Gloves Tournament last week sponsored by the High Point Y. M. C. A. And, needless to say, he came through with the usual belt awarded the champions. Joe took with him one of his sparring partners, Itney Chadwick, who is a lightweight. Chadwick punched his way through the contest in the Golembek style, and won himself a belt also.

Joe fought twice. He won the first fight by a technical knockout shortly after the second round got underway, and the second fight was awarded him on a decision. Joe says he knocked Newman (who comes from Catawba) down no less than an even dozen times. Anyone who doubts this should see Joe. Observers of the fight say that the Indian was very bloody, and was under the care of a doctor the rest of the night.

Chadwick didn't get a knockout, but he gained decisions over both of the men he fought. The names of all the men the Elon fighters met were not available. Chadwick, who hails from Beaufort, "the high tide" country, is a football man, and should see action next year on the gridiron as well as in the ring.

James Rumley, a day student, and Frank Hayes from the high school, also entered the tournament. Rumley lost in the first fight, and Hayes came through to the semi-finals.

Commercial Club Has Interesting Trip

April 19 found half of the Elon Commercial Club starting spryly out for Greensboro at 8:15 a. m. on an inspection tour of the Remington Rand Co. and the Pilot Life Insurance Co. Five-thirty found that half coming back to Elon—not as spryly as they had started out, but all wearing a happy and contented smile. The other half of the Club, but not the better half, took the same trip April 25.

Of course getting out of classes a day makes any student happy; but besides this attraction a most interesting day lay ahead of the Elonites. The Remington Rand Company took much time to explain in detail the different styles of filing and showed the various types of files. During luncheon, a social hour was enjoyed, and the group entertained Mrs. Howell, sponsor of the group, with many jokes and bits of nonsense.

The next stop in the itinerary was the Pilot Life Insurance Company, between Greensboro and High Point. A tour of this company proved most valuable and interesting. One of the largest offices operating, it has much to offer to the business student in the way of every modern convenience and machines. It gave the students an idea of the business world and what to expect. The company extended many courtesies, and made the inspection tour a most enjoyable one.

The tour was part of the Spring program of the Commercial Club.

Ministers On Annual Outing

The Elon Ministerial group closed their year's activity with a fish-fry at the home of Emerson J. Sanderson near Brown Summit on Monday of this week. The group motored to the home of Mr. Sanderson and spent the afternoon fishing (no fish caught—store fish used), and indulging in ministerial gossip. Those included in the party were Dr. French, Dr. Bowden, President Murchison, Moody, Hedgebeth, Bowers, Sanderson, Dollar, Cooper, McDade, Elmore, Vore, Sears, and Hackney. The fish, corn bread, and coffee were the best ever made, because of the culinary experience of the two married cooks, Sanderson and Vore.

All apparently enjoyed the gathering, and after President Murchison and Dollar washed the dishes, the group returned, feeling a bit fishy around the gills.
