Freshman Hannah Clements St. Thomas, U.S. Virgin Islands

Anton L. Delgado Assistant News Editor | @JADelgadoNews

OR ALMOST 12 HOURS, Elon University freshman Hannah Clements lost all forms of communication with her family after Hurricane Irma tore through her hometown of St. Thomas, the gateway isle of the the gateway isle U.S. Virgin Islands.

As one would expect, she was nervous. But the phone conver-sation she had with her parents after the storm did not help her fears.

"It looks like a bomb's gone off," Clements recalled her father said the day after the hurricane battered her home.

Hurricane Irma is the longest lasting Category 5 hurricane ever recorded. Its wind speed topped off at 185 miles per hour, while Irma itself covered 70,000 square miles, which is larger than the state of Florida.

Its path of destruction steered through the Caribbean and made landfall in Florida,

killing at least 40 people so far. Clements is part of the 4 percent of students with perma-nent addresses in Irma's path.

Nontraditional students navigate Elon's traditional campus

Alexandra Schonfeld Lifestyle Editor | @aschonfeld096

In August Elon University welcomed 1,553 freshmen onto campus to begin the four years of their undergraduate career. While the majority of students on campus are between the ages of 18-22, among them are "nontraditional" students hoping to obtain a degree and better their lives. Nontraditional students — students over the age of 25 - only make up 1 percent of the Elon student body, though exact numbers were not available through Elon University admissions.

These are students who often have their own families and responsibilities, but have made the decision to come back to school in hopes of reaching a brighter future. But despite their best efforts, some of these stu-dents are finding it hard to feel welcomed as part of the Elon community.
