**HENRY DAVIS '09 SPEAKS
 AT "Y"**

Thursday evening, March 30th, the boys had the privilege of hearing Henry Davis, '09. Mr. Davis has just returned after several months in Germany, where he has been in charge of the Friends reconstruction work. He gave a great deal of first hand information upon the work of the relief units and the general conditions in Germany, Austria and Poland. Since Germany does not produce enough food for her own use the cutting off of the outside supply during the war, caused much suffering, and the conditions at the close of the war were very bad. In 1917 turnips were the only food which could be had in anything like sufficient quantities and the poorness of this diet caused much suffering, especially among the children.

Relief work was begun in Germany and Austria very soon after the war was over. Much money was raised in the United States, and spent under the direction of Mr. Hoover for foodstuff which were then shipped to the most needy points. The German government paid for the transportation and furnished the workers and the flour and sugar they needed in the work of relief. Milk was very hard to obtain and it has only been furnished to mothers and children under one year of age.

Hamburg was the first main headquarters of the Relief Commission. From there the Americans organized the work in all directions and also secured the aid of existing organizations. School children were examined and all who needed food

were lined up to get a hot meal once each day. This was only one phase of the work. Many children were found to be in extremely bad condition. Through lack of food their normal development had been arrested.

At the present time conditions are much better and the relief work has been turned over to the Germans themselves who are endeavoring to keep going the organizations started by the Americans. There is now food enough on the market and may be had by those with the money to buy, yet money is of so little value now that the working people have much difficulty in obtaining enough to buy necessities of life.

**DR. PERISHO SPEAKS AT
 WINSTON**

On Thursday, March 30, Dr. Perisho and Dr. Binford were in Winston-Salem. Dr. Perisho spoke to the 700 students of the High School in the morning. At lunch he addressed the members of the Kiwanic Club, in the Robert E Lee Hotel, concerning Muscle Shoals. Paul Nunn who is secretary of the Guilford Club of Forsyth County, arranged for the meetings and entertainments for these college officials while they were in the twin city.

On April 3 Dr. Perisho begins his visit of the high schools in Davidson County. He will address each high school group in this County and on April 5, will give an address at a group center commencement at which several schools will be represented.

On April 6, Dr. Perisho will speak to the High Point high school. April 7 and 8 he will be at Montgomery and will speak at Troy on the evening of the 7th.

Man-Made Lightning

FRANKLIN removed some of the mystery. But only recently has science really explained the electrical phenomena of the thunderstorm.

Dr. C. P. Steinmetz expounds this theory. Raindrops retain on their surfaces electrical charges, given off by the sun and other incandescent bodies. In falling, raindrops combine, but their surfaces do not increase in proportion. Hence, the electrical pressure grows rapidly. Finally it reaches the limit the air can stand and the lightning flash results.

And now we have artificial lightning. One million volts of electricity—approximately one fiftieth of the voltage in a lightning flash—have been sent successfully over a transmission line in the General Engineering Laboratory of the General Electric Company. This is nearly five times the voltage ever before placed on a transmission line.

Much valuable knowledge of high voltage phenomena—essential for extending long distance transmission—was acquired from these tests. Engineers now see the potential power in remote mountain streams serving in industries hundreds of miles away.

Man-made lightning was the result of ungrudging and patient experimentation by the same engineers who first sent 15,000 volts over a long distance thirty years ago.

"Keeping everlastingly at it brings success." It is difficult to forecast what the results of the next thirty years may be.
