PRES. BINFORD REPRESENTS
GUILFORD AT MEETING OF
AMERICAN ASSO. COLLEGES

(Continued from page 1.)

made the following statement: "Dr. Newton gave a strong address in which he pointed out that the world today is having a great deal of difficulty in connecting up its religious ideas with the world as the scientist sees it. His defense of the proposition that man was made for faith was both convincing and inspiring. He contended that men should surrender themselves to faith and to religion. Through this only could they attain to the highest type of personality." While in New York City Dr. Binford attended the meeting of the Educational Board of the Five Years Meeting, held on the morning of Jan. 14, of which he is a member. Some of the topics discussed in this meeting centered around the orientation courses which the various Quaker Colleges are introducing, and the obligations of the Quaker Colleges in the teaching of religion and science.

During his stay in Pennsylvania, Doctor Binford visited Haverford College, where he was the guest of Edwin M. Wilson of the class of '92, and Headmaster of the Haverford School. He also visited Robert Marshall, who is this year attending Haverford College and is now resuming his work there after a three weeks detention at Johns Hopkins, to a partial nervous breakdown. Doctor Binford visited Hartford Theological Seminary and had a chance to see Russell Branson who is doing graduate work there this year.

In Philadelphia President Binford called on William Allen, a member of the class of '99. Mr. Allen holds a position with Philadelphia National Bank in the Bond and Securities Department. In addition to his duties at the bank, Mr. Allen has had time to complete a course in Law so as to make his services to the bank more valuable and in addition to this he is now near the completion of a four years course in Theology and Religion at Temple University. In speaking of Mr. Allen's achievements, Dr. Binford said: "Such scholastic habits on the part of Guilford Alumni, bring real honor to the name of the college."

While in Washington D. C., President Binford called on David H. Blair, Commissioner of Internal Revenue whose office is in the United States Treasury Building. He expressed delight at seeing Mr. Blair again and finding that he maintains such a sympathetic interest in the program of Guilford College. In Baltimore, President Binford spent some time with Spot Taylor, and found him enthusiastically pursuing his medical studies in Johns Hopkins Medical School. While in Wilmington Delaware, Dr. Binford visited at the home of Alva Lindley and Alice Woody Lindley. Mr. Lindley is still enthusiastically carrying on his work as General Secretary of the Young Men's Christian Association of that city. While in New York President Binford made a short trip to Oakwood School, Poughkeepsie, N. Y. where he spent a few hours with Curtis Newlin Prof. of History and Dean of Boys. In speaking of this visit, Dr. Binford said: "It was a pleasure to visit Curtis Newlin and to see him in his life with the students of that school where his services are so highly appreciated."

Dr. Binford also had an opportunity to visit Harvard University and to see Joseph D. White and Gladstone Hodgkin in their work there. Joseph White is doing some intensely interesting work on the internal effect of high pressure on metals and other substances. He is nearing the completion of his work for a Doctor's degree. Gladstone Hodgkin is enthusiastic over his study of landscape architecture, for which study Harvard offers splendid opportunities.

This giant hydro-electric unit weighs 750 tons and consists of a vertical shaft hydraulic turbine attached to an electric generator delivering 52,000 kilowatts at 12,000 volts.

Bigger Generators—
Cheaper Electricity

A 70,000 horsepower hydro-electric unit recently installed at Niagara Falls utilizes the same amount of water as seven former 5,000-horsepower units, yet does the work of fourteen such units. And it saves 700,000 tons of coal yearly for the nation.

As more and still more uses are found for electricity, larger and more economical generators are installed. At the power plant, as well as at the consumer's end, important changes and startling developments have steadily reduced the cost of electricity for light, power, and heat.

And wherever electricity has blazed its trail—in towns, cities, industrial centers, and rural communities—comfort and progress have come to stay.

Generating and distributing electricity concern the technical student. But electricity's application in the betterment of industry, the professions, and home life concerns every educated person. Cheap electricity means many startling achievements today, but countless and unbelievable possibilities tomorrow.

The General Electric Company, as of December 3, 1924, had 37,716 stockholders, of whom 45 per cent were women. The average number of common shares held by stockholders was 55. In ownership, policies, past and present activities, G-E is unselfishly dedicated to the cause of electrical progress.

A new series of G-E advertisements showing what electricity is doing in many fields will be sent on request. Ask for booklet GEK-1.
