

W. F. C. ANNIVERSARY IS VASTLY ENJOYED BY MEREDITH GIRLS

Wake Forest Anniversary, which is always an event for Meredith girls, was observed Friday, February 17, 1922 for the eighty-seventh time. In the afternoon the question of government ownership of mines was debated with D. M. Castelleo and E. L. Roberts upholding the affirmative and V. E. Howell and W. B. Booe the negative. In the evening Charles A. Howard delivered an oration on "Quo Vadis America" while T. W. Allen chose as his subject "The Voice of the Black Man." Meredith unfortunately did not arrive until about six-thirty and so missed the debate, but if one may judge the whole by a part, they were excellent. Of the orations, Mr. Howard's was the better; he opened his speech with a discussion of the part America had taken in the past, discussed her present position and raised the question of what her use of her great influence should be. Perhaps our Southern minds were too prejudiced to appreciate the real worth of Mr. Allen's oration. It was a masterly piece of thinking which gave expression to so true and unbiased a picture of the conditions of the negro race and its hopes for justice and rights.

At eight-thirty Society Halls were thrown open to the reception which was attended by faculty and Alumni as well as the present student body. The music which was furnished by the Ray Orchestra was delightful. Punch, ice cream, and cake were served as refreshments. All too soon eleven o'clock came and Dr. Brewer informed the Meredith delegation that it was time to depart. A special train had been provided to bring them back to Raleigh. This however, was almost two hours late, so the visit to Wake Forest was prolonged for a short while, and it was not until nearly two o'clock Saturday morning, a crowd of gloriously tired girls came in to wake up their peacefully sleeping neighbors.

Our Mission Study Classes were a great success. They were the most interesting we have ever had, and were the best attended. We feel that a large share of credit is due Miss Margaret Duncan, president of our Y. W. A.

IMMENSITY OF THE UNI- VERSE IS THE TOPIC OF LECTURE

On Friday night Feb. 17, Mr. W. A. Dietrich, a member of the British Astronomical Society and the Boston Astronomical Society, presented to the faculty and student body an illustrated lecture on "The Immensity of the Universe."

The lecture was intensely interesting as well as instructive, and, as the subject shows, the content ranged from a discussion of the butterfly's tongue to the fire mist from which worlds are made.

Outlining his lecture as to the three spheres in which we live—lithosphere, hydrosphere and atmosphere, and with a brief explanation of lithosphere the speaker discussed the hydrosphere, "the sphere in which all life had its beginning." He called attention here by

FRESHMEN ENTERTAIN THEIR SISTER CLASS

The Society Halls presented a scene of Cupid's abode on Saturday night, when the Freshmen entertained the Juniors at a Valentine party. On entering Astro Hall, each person was given a heart, on which was written a name, and told to find her lover. After the couples were formed, there were mates ranging from Adam and Eve to Jiggs and Maggie. Then there was a contest of Famous Women and what was the surprise when it was found that the answers to the riddles were Juniors' names! Ruth Freeman got the prize, a heart-shaped box of candy. Brains, we say. Of course everyone learned her fate and had her fortune told, and Sunday morning Miss Royster, like the rest, was still trying to locate her "to be." After hearts were matched, everybody went into Phi Hall where refreshments were served—everything carrying out the scheme of Valentine and sister classes. Everyone was carried away with the 23-25 cakes. The Juniors pulled heart strings for souvenirs—some getting trinkets and coins, others whistles, etc. There couldn't be a sister class party without the exchanging of songs at the end; and the Juniors went away enthusiastically saying that their "little sisters" were the sweetest things, and had the cutest songs, and knew just how to make a party a sure 'nuff success.

NEW INTEREST IN MIS- SION STUDY IS FELT BY STUDENTS

We have just passed through a most inspiring week of Mission Study. In the seven classes there was an enrollment of about one hundred and fifty girls. We departed from several old customs regarding mission study activity and adopted new methods of procedure which were successful.

In the first place, instead of having the classes meet for six Sunday evenings during the fall semester we had a week of intensive study—beginning Sunday evening, Feb. 12, and ending Feb. 17. The classes met each evening just after dinner for about forty-five minutes.

In the second place, instead of having Freshman, Sophomore, Junior and Senior classes we gave each girl the opportunity of enlisting in whatever class she desired. In this way she could choose the subject which appealed to her most.

The third departure from the usual custom was that of having ladies from the Baptist churches of the city teach the classes. Here-
