April 17, 1990

Dr. Jane Goodall to Visit Meredith

Dr. Jane Goodall, world renowned scientific expert and author on the subject of primate behavior, will speak at Meredith College on April 20 and 21. Her visit to Raleigh is the only North Carolina stop during this trip to the U.S.

On Friday, April 20 at 10:00 a.m., Dr. Goodall will speak in Jones Auditorium to Meredith College students, faculty and staff about her career challenges and opportunities. On Saturday, April 21 at 10:30 a.m. also in Jones Auditorium, she will address the Carolinas Psychology Conference to discuss her research and her scientific observations with the group.

Dr. Goodall and her accomplishments have become legendary since she began her work in 1960 as the protege of famed anthropologist/paleontologist Dr. Louis S. B. Leakey. She completed her Ph. D. in ethology at Cambridge University, England, in 1965 and founded The Gombe Stream Research Center that same year. Through publication of five books, her appearances on National Geographic Society specials and her annual lecture tour, Jane Goodall has become one of the most respected and publicly recognized scientists in the world. Within the scientific community, she has published numerous articles and has been credited with the first recorded observations of chimps eating meat and making and using tools -- the latter believed until that time to distinguish man from all other animals. The World Wildlife Fund has recognized her research as the longest unbroken field of study of any group of animals in their natural habitat ever conducted.

The seating for the lecture is expected to be limited and will be by student identification card or ticket along with press passes.

This photo shows Dr. Goodall working in Africa, the site of her chimpanzee studies.

Goodall Videos to be shown on Meredith Cable

Media Services will be broadcasting two videotape programs on Jane Goodall numerous times over the next few weeks. The broadcasts over Meredith Cable Channel 13 will enable you to assign viewing to be done outside of class time, and will assure students of plenty of opportunities to see the two programs. Program summaries and broadcast schedules are listed below.

Among The Wild Chimpanzees (AWC), 59 minutes

A National Geographic Special, which looks at two decades of Goodall's work, including her discovery of chimpanzees making and using tools.

Jane Goodall: A Life in the Wild (JG),

30 minutes

A personal view of Jane Goodall, from her childhood to her later contact with Louis Leakey and her subsequent study of chimpanzee behavior. Summarizes her major discoveries and deals with human identity in relation to her findings about chimpanzee life.

Broadcast Schedule for each week 3/13-4/20, Channel 13

	<u>Tues</u>	<u>Wed</u>	<u>Thurs</u>
11 a.m.	AWC		AWC
NOON	JG		JG
5 p.m.	AWC	AWC	AWC
6 p.m.	JG	JG	JG

Additional cable showings may be arranged by request (829-8444).
