

This is a view in the beam storage area in the Weave Room at the Alexander Sheeting Mill. Properly zoned areas contribute to good mill housekeeping. Barrels, boxes and other equipment are kept in designated locations.

In the Spinning Department polyethylene covers are free from lint.

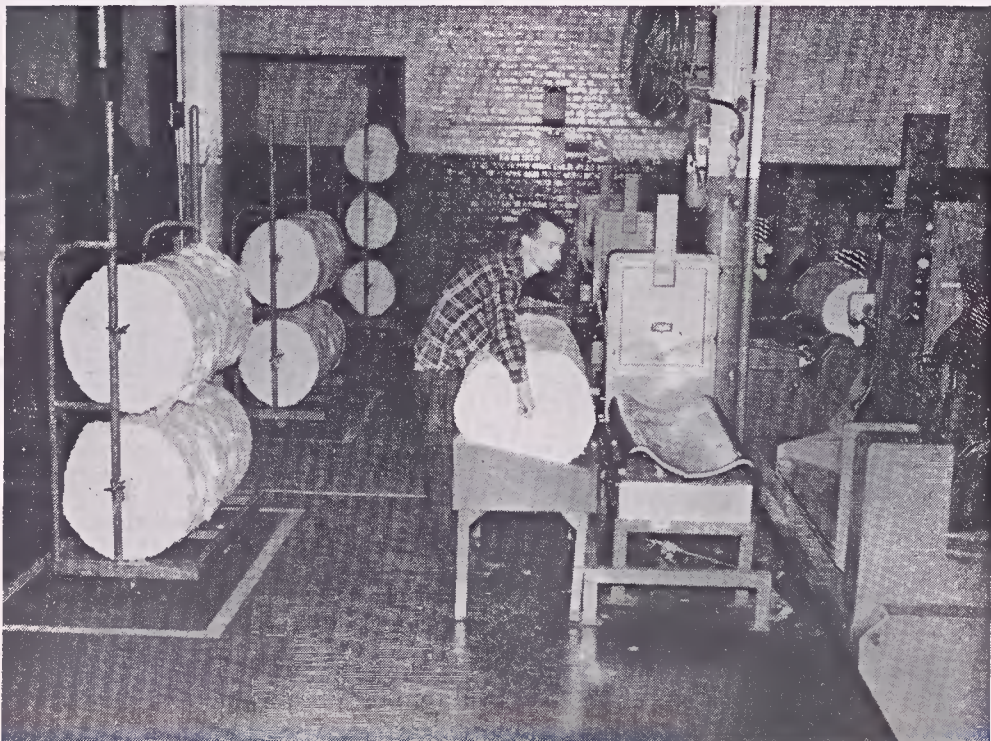

Outstanding Housekeeping Program

Excellent mill housekeeping practiced by the Alexander Sheeting Mill at Forest City is shown in the pictures on these pages. The mill has a continuing program designed to maintain orderliness and cleanliness in the work surroundings.

The mill is following a program established some time ago which involves a regular routine of cleaning and maintenance with strict follow-up of the various points in the program.

Equipment, floors, walls, posts, light fixtures, air ducts, etc. are cleaned on an established schedule. Floor finishing, touch-up painting and other maintenance duties are kept up to date. The floors are marked with zone lines for proper storage of movable equipment.

In the Picker Room, lap trucks are lined up in the proper zoned areas. The equipment is clean and the area is orderly and well maintained. Walls are free of dust and lint. Operator is Calvin Teseniar.

Modern automatic cleaners in the Spinning Department prevent accumulation of lint and keep all times.

The effectiveness of the program is given to posts, walls, fixtures, etc. in places where lint tends to accumulate, particularly beneficial in the picker room. The aisles are kept open for bumping, stumbling and tripping.

In commenting on the program...

Outstanding warehouse-waste storage of particular types of waste and the area is left open for...
