<u>raven Noticeboard</u> West (

DRIVERS NEEDED

DRIVERS NEEDED Drivers are needed to transport people for the Council on Aging from Vanceboro to appoint-ments with doctors. Mileage will be paid. Contact Camille at 638-2118.

YOUTH BASKETBALL

The Craven County Recreation and Parks Department is holding registration for youth ages seven through 18 from Vanceboro, James W. Smith and West Craven Middle schools. The league will consist of four divisions — mites, 7-9; midgets, 10-12; juniors, 13-15 and seniors, 16-18. Games will be played at Van-ceboro and West Craven Middle School beginning in December. To sign up or for more informa-tion, call 636-6606.

MINT MUSEUM

The Craven County Arts Council is offering an overnight bus trip to Charlotte to experience the splendor of Egypt's most phenomenal pharoah in the ex-hibition "Ramesses the Great: The Pharoah and His Time.

The bus will depart New Bern the morning of Nov. 30 and re-turn Dec. 1. The cost of the tour is \$99 per person for double occupancy or \$127 for single occupan cy. The cost includes transporation, overnight accomodations at the Radisson and a ticket to the exhibition.

The tour is limited to 36 people and all seats will be reserved in the order that deposits are received. For more information, call 638-ARTS or send a check to the Craven Arts Council, P.O. Box 596, New Bern, N.C., 28560.

ARCHERY

Learn and experience the challenge of archery. Craven County Recreation and Parks Department is seeking currently orga-nizing archery classes in New Bern beginning this fall. Classes will be available for youth, adults and senior citizens. In interested in participating or for more information, contact Eddie Games at 636-6606.

WRESTLING

The Craven County Parks and **Recreation Department will** offer children's wrestling this year. Coaches are also needed. For more information, call the department at 636-6606 or Tom Marsh after 7 p.m. at 636-3344. The program will start in November November.

FALL PROGRAMS

The Twin Rivers YMCA began the second session of fall prog-rams Oct. 31. Programs will include low impact aerobics, CAM Il fitness classes, small-fry gym-nastics (ages 2-5 years), after-

school gymnastics (ages 5-14 years), men's 4-on-4 basketball, basic exercise and stretching and more. Please call the YMCA at 638-8799 to pre-register for for more information more information

CIVIL WAR EXHIBIT The New Bern Historical Society is sponsoring a special ex-hibit of Civil War, also known as the War Between the States, at the Attmore-Oliver House Museum through Dec. 16. The exhibit is open from 1 to 4:30 p.m. Tuesdays through Fridays. A fee is charged.

HOLIDAY COOKERY

HOLIDAY COOKERY Holiday cookery will be the topic of a Nov. 30 presentation scheduled by the Craven County Agricultural Extension Servie. At 10 a.m., Elizabeth Braddy, home economist with the N.C. Egg Association, will demons-trate holiday food ideas includ-ing holiday recipes, garnishes and food gifts. The program will be held in the demonstration kitchen of the Agricultural Cen-ter in Industrial Park, New Bern. There is no charge by registra-tion is required by Nov. 9. To register, call the Craven County Extension Service at 633-1477.

BASKETBALL COACHES

Youth basketball coach volun-Youth basketball coach volun-teers needed two two days a week between 4 and 6 p.m. Knowledge of basketball skills and genuine interest in children required. Contact Twin Rivers YMCA at 638-8799 for more information on these coaching positions.

CUB SCOUTS

A Cub Scout pack will begin early this month on Monday afternoons. Boys in the first through third grades, volunteer leaders and committee members are needed. Contact Twin Rivers YMCA for more information t 638-8799.

YOUTH BASKETBALL

Youth basketball pre-registration is now being con-ducted for youth ages 5 through 12. Games will be on Saturday mornings beginning Jan. 7. Call or come by the Twin Rivers YMCA at 638-8799 to pre-register a child.

SEEK-A-SENIOR

The Twin Rivers YMCA Seeka-Senior program is a referal service promoting odd-job employ-ment of active older adults who are 55-years-old or older by community members needing work done at reasonable rates. Call the YMCA at 638-8799 to find resources for hiring seniors to do such work as maintenance and repair, sewing, house-sitting and

they may begin up to five years before menses actually end. Dry-ness and irritation of the vagina,

leading also to discomfort with

intercourse, and an occasional leakage of urine may develop,

since these tissues are respon-

sive to estrogen. A variety of psychological

symptoms may also develop, and some may be due to a lack of estrogen. Osteoporosis (or thin-

ning of bone) is common after

menopause — more so in small, thin, white or oriental women, or

women whose ovaries were sur-

gicaly removed at a young age. This bone loss can lead to com-

pression fractures of the spine,

causing decrease in height, along with severe back pain. And, more

Should Congress Ban AIDS Discrimination?

Dr. Frank Lilly was a member of President Reagan's Commission on AIDS. He is professor and chairman of the department of genetics at Albert Einstein College of Medicine in New York.

43

Do you favor a federal law banning discrimination in the workplace against people infected with the AIDS virus?

Yes, strongly. Nearly 600 experts from diverse AIDS-related fields testified before the AIDS commission: many referred to AIDS-related discrimination as a very severe problem that must be addressed if we are to make progress in controlling the disease. We recommended federal legislation that would extend to the private sector existing anti-discrimination regulations for groups doing business with the government. The White House wants to leave the problem to the states, but that approach has not helped much with any other discrimination problem.

mental AIDS treatment programs, such as **AZT treatments?**

treatment in many ways. It works remarkably well for a lot of people, proving that AIDS is a treatable disease. However, we need more and better treatments for AIDS. Why is AIDS more urgent in this respect than other diseases? Only because, unlike most all other diseases. AIDS is increasing at a truly scary rate. Left untreated, it is among the most expensive diseases to care for. Even though AZT is also expensive and thus accessible only to the wealthy and the very well insured, it is a bargain for the government, which will end up paying most of the bill either way.

fection be kept confidential?

been considered to be confidential, and there are no public health grounds for making an exception for AIDS. Even when it is deemed necessary to inform the previous sex partners of an AIDS virus-positive person that they may have been exposed, this should be done without identifying the individual. Loss of confidentiality often leads to discrimination and fear of discrimination keeps infected people from coming forward to be diagnosed, treated and counseled about how to avoid spreading the infection further. 1988 PM Editorial Service:

U.S. Sen, Steven D. Symms (R-Idaho) is a member of the Senate Armed Services, Budget, Environment and Public Works, and Joint Economic Committees.

NO

Do you favor a federal law banning discrimination in the workplace against people infected with the AIDS virus?

We need a common sense approach when dealing with employees with AIDS. Many working Americans have genuine fears about the unknowns of AIDS and those fears must be addressed.

So far, the focus of the AIDS issue has been on the rights of the AIDS carrier. However, the hype regarding the "victims" must not outweigh the rights of the greater public. We must ensure the safety of the vast majority of workers who do not have AIDS.

The fact is that AIDS is a serious disease that could affect morale and, more importantly, the safety of the workplace. Employers, rather than the federal government, should look out for the productivity and safety of ALL employees.

Should the federal government fund experimental AIDS treatment programs, such as **AZT treatments?**

The taxpayers shouldn't have to bear the cost of treating AIDS or any other disease. Similar attempts at socialization of treatment in other countries have failed miserably. However, I do support research initiatives which will allow production of medicines to combat the menace that AIDS poses to the public health.

Should the results of tests for AIDS virus infection be kept confidential?

One effective way to prevent the spread of AIDS is through testing. And the confidentiality of those results is certainly at the forefront of the debate. However, there are many ways to define confidentiality. I don't think the results should be tatooed on carrier's arms or posted on a bulletin board in the workplace. However, the spouse and any other sexual partners must be notified, so the progress of the disease can be traced and stopped before more people are infected.

When dealing with the confidentiality question of AIDS testing. Washington politicians must not ignore the real public health risks of this deadly disease in order to cater to special interests. Iil

Estrogen Helps Relieve Menopausal Symptoms

By B. PEACOCK, M.D.

Menopause is the medical term for what is often referred to as "the change of life" in women. More simply and accurately, it is the end result of the normal aging process of reproductive potential, and the end of normal menstrual cycles. Ninety-five percent of women experience this "change" between the ages of 45 and 55. Women who require surgical removal of their ovaries prior to this time enter menopause

Hot flashes and a number of other symptoms are associated with these physical changes. To relieve these symptoms, consid-cration is often given to hormone Many women, although plagued by these symptoms, are reluctant to inquire about, or take hor-mone treatment, for fear of developing cancer or other illnesses.

Quite a bit of information is known about hormone therapy. Although some cases of uterine cancer were previously related to estrogen treatment, we now

taken when a patient is using this About 75 percent of all post method. menopausal women experience some degree of hot flashes, and

Patients will usually be started on the lowest available estrogen dose, and increased as needed to alleviate symptoms. Those pa-tients without a uterus no longer run the risk of uterine cancer, but they still have menopausal symptoms at the appropriate time. Adding progesterone to even these patients' regimen may be desirable, since it is a normal female hormone, and it may have a protective influence on breast changes. Studies have not et proven its advantage, however.

Other hormonal or medical treatments are available to those patients unable to take estrogen, and usually offer at least some

In conclusion, menopause is a normal process, but estrogen and progesterone treatment can make it a much more tolerable one. Women experiencing menopausal symptoms should not hesitate to consult their gyneco-logist about their problems, and about treatment options for estrogen replacement.

This weekly column is provided by the management of Beaufort County Hospital and its medical staff. Questions and com-ments may be sent to Pamlicarc. Washing-ton Daily News, 217 N. Market Street, P.O. Box 1788, Washington N.C. 27889. Dr. Brenda Peacock is an obstetrician' gynecologist and has an office in Washing-ton at the Washington's Women Clinic.

Soil

ASCS Staff Now is the time to plan for tree planting or reforestation. January through March is the best time to plant trees in Craven County. Most reforestation is done with

loblolly pines. Seedlings, which cost \$22 per 1,000 (\$24 with delivery), can be obtained by filling out a form from the N.C. Forest

Site preparation is the first step in tree planting. The objective of site preparation is to reduce competition from other plants and trees without removing or des-troying the topsoil and organic matter. It can be done several ways.

Among them are disking and furrowing with a fire plow, drum chopping, pushing and piling unwanted trees and vegetation, and prescribed burning. Prescribed burning and drum chopping used together is one of the most effective methods of site prepa ration.

ly pines is seven feet by 10 feet, a plot that allows 622 seedlings per acre. On wet and low quality sites, bedding is used to improve drainage and make planting easier. Pines planted on beds in wet areas also benefit from im-proved nutrition and soil aera-tion tion. If seedlings are planted in an area that has had trees harvested off of it within the previous year the seedlings should be treated with chemicals to protect them from the Pales weevil. Quality seedlings should have a collar diameter of at least % inch, stiff and woody, and have a maximum top length of 14 inches and a root system between five and nine inches. The seedlings roots must be kept moist prior to planting, the roots should not be exposed to the sun, wind, heat, drying or freezing at any time until planted. No roots should be ex-posed to the sun or wind for more than 10 minutes

per acre. There are also state and federal programs that are avail-able for cost sharing on tree

planting. The N.C. Forest Service has a The N.C. Forest Service has a list of local private contractors that do tree planting and soil pre-paration. Those interested in learning more can contact the forest service or the Soil Conservation Service.

Should the federal government fund experi-

Actually, AZT is no longer an experimental

Should the results of tests for AIDS virus in-

Of course. One's medical history has always

know that if given both of the normal female hormones (estrogen and progesterone) in the proper amounts, one's risk of developing a tumor does not increase. Very few women would not be candidates for hormone eplacement, primarily those with recent breast or uterine can-

Following estrogen replace-ment, studies have shown that patients experience no increase in high blood pressure problems over normal levels, no increased risk of clotting disorders or di-abetes, and no increase in heart attacks. Estrogen in fact probably has a beneficial influence and likely decreases the risk of heart attack in many women.

If we consider again the symp-toms which may warrant treatment, they generally develop from inadequate circulating estrogen levels. Overweight women tend to have less severe symptoms than smaller women, because increased fatty tissue allows other hormones to be changed into estrogen, and re-latively higher levels are main-

4

tioned would warrant estrogen replacement, if not contraindi-cated, at any time just prior to or after menopause. Regarding osteoporosis, if significant bone loss has already occurred, it can-not be replaced. However, the process of losing the bone tissue can be stabilized.

The most common form of estrogen treatment is oral estrogen for the first few weeks of the month, adding progester-one for at least 10 days near the end of the month. Some women will have menstrual type bleed-ing when they are following this regimen. If this is undesirable, a smaller amount of progesterone can be added daily to prevent the excessive stimulation and cancer risk from estrogen alone, and prevent bleeding during the month.

A newer form of estrogen re-A newer form of estrogen re-placement therapy, the transder-mal patch, has also become popular. No real advantage to this method has been shown, however, except for the convenience of only having to apply it twice a week instead of every day. Progesterone should still be

Bragging Rights

On two recent outings, Vanceboro School of Martial Arts com-peted in the Craven Coounty Brag Rights Tournament. Franke Ipock, men's green belt, finished first in fighting and thrid in kata. Joseph I pock was third in kata and fourth in fighting and third in Kata Joseph I pock was third in kata and fourth in fighting in the Pee Wee Division. Chris Drake was first in kata and second in fighting, David Altry was first in kata and first in fighting in the men's white-belt division. David Mack was fourth in kata and fourth in fighting in the men's white belt division. In the Pee Wee Division, Chris Mack was fourth in fighting. At the 13th annual Battle of the Carolinas, Ed McGovern, a fourth-degree black belt, placed third in the Kata Master Division. Greenbelt Frankie Ipock placed in the fighting category. Joseph Ipock placed second in the kata section of the Pee Wee Division. In the Junior Division, Steven Bradley placed third in fighting.

Cost sharing is available for tree planting through the Agri-cultural Stabilization and Con-servation Service office at \$30

will have the following provisions

-A 10 percent acreage reduction requirement.

-No paid land diversion. -An 0/92 provision will be offered.

--A target price of \$2.84 for corn, \$2.70 for grain sorghum, \$2.43 for barley, 85 cents for oats

And \$1.40 for rye.
Antional loan rate for corn of \$1.65 per bushel.
Oats will not be subject to cross compliance provisions.

CROSS COMPLIANCE

Cross compliance will be required for all program crops ex-cept oats. Oats may be planted in excess of their base unless the farmer is enrolled in the oats program, in which case he can plant 95 percent of his base and leave 5 percent for ACR.

SOYBEAN LOAN RATE

Producers may receive a loan on their 1988 soybeans at \$4.83 per bushel.
