CLIMATE YEAR AFTER YEAR

(By E. K. Veach)
Aurelian Springs Agric.
The people of this and other sections of the state have been grieved over the crops for the past few years. This, as you know, is the last year was extremely dry. This season has been to a large extent a long dry period.

We should not stop trying to succeed in farming due to the depression and the two crop years, but work more than ever before to improve methods by putting on a more program of work.

There is one thing we want to impress on every farmer, access to a garden and "don't forget to keep something in it every month of the year."

We realize the drought vegetable crop short as other crops, but prepare to plant cabbage and collard plants transplanting in October and of November. Sow a few winter and spring use. On planted this fall so as to be in the spring.

All of us may not like food I have just mentioned may have to eat something like if the "live-at-home" type more in the future been in the past.

Home grown vegetables made an important meal in the family budget homes. Recent discoveries of human nutrition have value and absolute necessity vegetables in the diet if it is to be maintained.
