

STATE BANKS SHOW GOOD INCREASE IN THEIR RESOURCES

Last 8 Months Period Also Shows Marked Increase In Depositors

Raleigh, May 30.—Resources of North Carolina State banks had increased \$29,021,932.46, or from \$175,655,727.35 to \$204,677,659.81 in the eight months from June 30, 1933, to March 5, 1934, date of the last call of statement of condition, in which time deposits of all kinds increased from \$147,138,498.62 to \$174,270,859.71, Commissioner of Banks Gurney P. Hood reports.

Resources showed a slight increase, about \$150,000, in the two months from December 30 to March 5, in which time regular deposits remained about the same and individual savings deposits increased about \$2,225,000. At the time of call, June 30, 1933, there were 204 banks and 76 branches; at December 30, there were 196 banks, including two cash depositories, and 42 branches, including one cash depository, and at March 5, 1934, there were 181 banks and 57 branches.

At the March 5 call, the State banks had increased the cash in vault and amount due from banks to \$53,485,830.84 from \$45,491,068.45 eight months before, had increased their stocks and bonds, largely U. S. and State bonds, to \$69,570,943.73 from \$41,483,848.52, while loans and discounts had decreased to \$68,565,991.89 from \$76,013,926.69 eight months before, and banking house and site items decreased about \$1,500,000, to \$5,840,797.65, and other real estate decreased slightly, to \$3,155,450.44.

Total liabilities of banks increased to \$176,258,184.48 from the \$148,938,022.50 of 8 months before, while the capital stock increased to \$28,419,475.33 from \$26,717,704.85 in the same period.

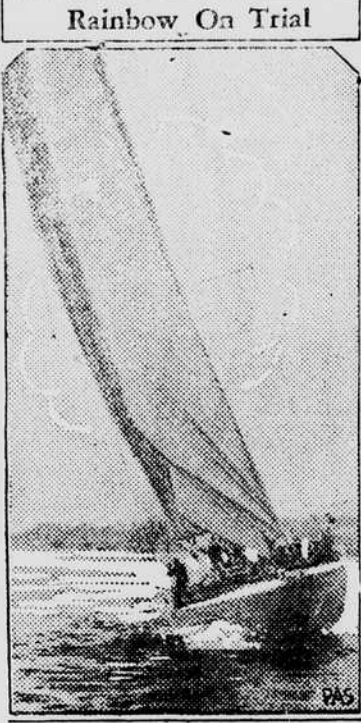

Aggregate assets of State banks and trust companies have again gone above \$200,000,000, the figures of June 30 of the two preceding years having been below that mark. The high point showed was \$324,034,302.34, March 27, 1929.

Industrial banks showed a slight increase in resources over eight months ago, or \$10,582,945.31 as compared with \$10,505,770.50, the lowest point shown, but did not reach the \$11,176,416.67 figure of Dec. 30, 1933. Present resources are only slightly above half the \$20,601,065.13 shown March 25, 1930, which is given as the high point reached in a decade. That figure had been reached by a gradual increase from the \$7,720,928.98 of Dec. 31, 1933.
