Expansion And Modernization Plan Nears Completion At Caromount Plant

Johnson Perry, (left), and Ervin Pittman (right) stack cloth in the old Raw Goods Storage Room. This room soon will be vacated and the raw goods will go from Weaving to the new Raw Goods Storage and Mending Room by underground conveyor belt.

John Flora of Raw Goods Storage stacks cloth with the new pallets now being used in the new Raw Goods Storage Building. This is a great improvement over the old method of storage shown at the left.

Yes, things have been torn up for the past six to eight months. You have been asked to work under conditions which were not good. But we are glad to report that arrangements have been made for the C. M. Guest Company to complete their work about September 22.

With the completion of the rearrangement of present machinery, installation of new equipment and modernization plan,

everyone should find his job running smoother in more pleasant surroundings. Some of the welcome changes have been:

1. Ventilation of the Dyehouse which is now nearly completed.

2. New and modern toilets and coat rooms which are still being built but after seeing the completed ones we know that they are well worth waiting for.

3. A new Inspection, Mending and Raw Goods Storage Building

that promises to be the most beautiful building on the lot and will have the most modern equipment available for inspecting, handling, and storing materials. A new underground conveyor will carry the raw goods directly from the weaving to the new storage and inspection building. This conveyor will make the raw goods handling problem much easier for the men who work there.

4. A new parking lot which has been in use for sometime.

5. New trucking equipment which is already in use.

6. New electric fork trucks for the Shipping Department.

7. A new yarn dye and printing department which is almost completed.

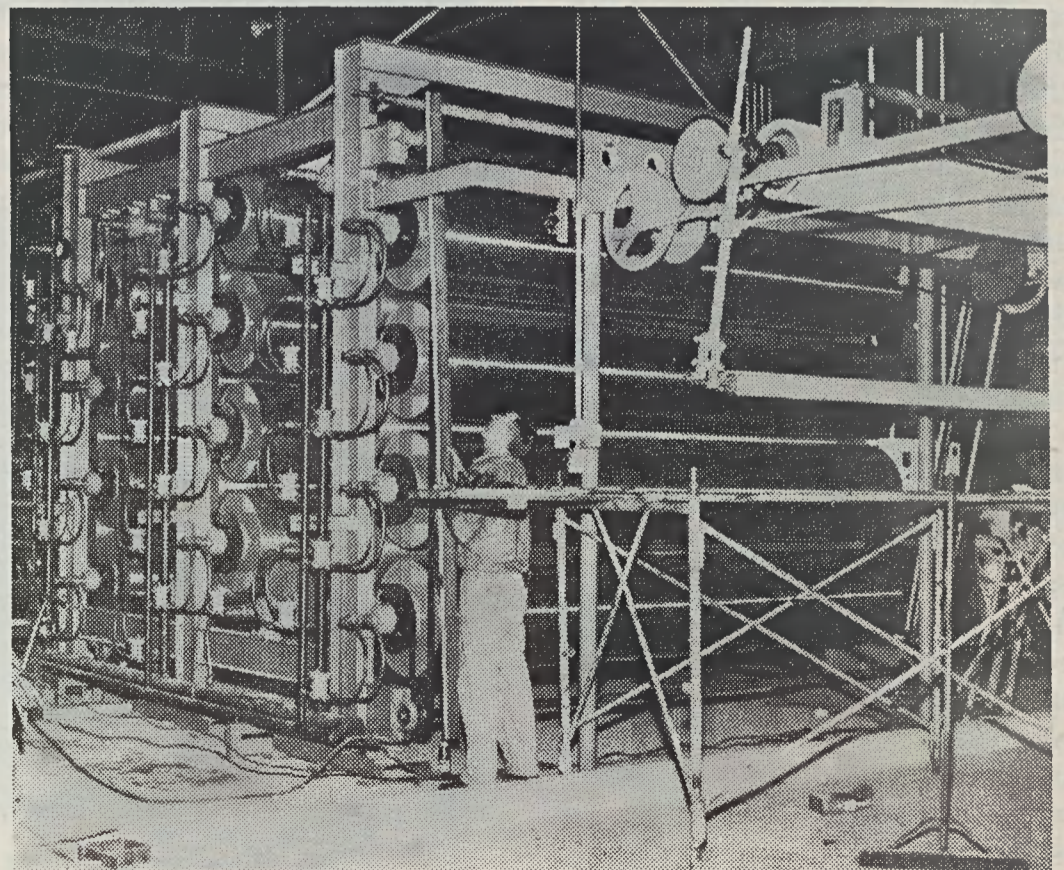

8. New scouring machine and pin tenter already in use and aiding production.

(See "CHANGES" Page Three)

Earl Ingram and Marvin Garrett of the Dyehouse guide cloth into the new Tensitrol Scouring Machine recently put into operation.
