Hines, Est. of Mary J., 62 2-3 acres home land	7.11
Johnson, Est. of James, 38 acres Walker land	6.46
Perkins, Robert, 65 acres Saunders land	7.89
Williams, Horace, 36 acres home place	3.55

### Serious Protein Feed Shortage Has Developed Lately

A serious shortage of protein feeds in North Carolina and thru out the Southeast for poultry, swine and cattle was indicated at a feed conservation and production conference held on May 4 and 5 at Greensboro. Officials of the State College Extension Service, the State Department of Agriculture and other cooperating agricultural agencies met with the oil millers, feed processors and livestock and poultry growers to work out methods of dealing with the shortage.

The consensus of opinion seemed to be that there were about enough proteins to last only one month, actually in eight. The ordinary supplies of cottonseed and

soybean meal have "mysteriously disappeared." Fish meal and bone meal are not to be had. Corn at a ceiling price of \$1.08 is now coming out of the West, where corn marketed through hogs is bringing about \$1.50 a bushel. Cottonseed meal at \$35.00 per ton has produced a "black market."

North Carolina's largest poultry grower, with 23,000 layers and 38,000 pullets, reported that he had just enough for about two weeks of feeding. One county agent reported that he could haul all of the feed in his county in feed dealers hands in one truck. Feed processors were clamoring for supplies of proteins and corn, saying they would be forced out of business in a few weeks unless help came.

Pres. J. B. Hutson of the Commodity Credit Corporation asserted that the supply of proteins for the U. S. was not alarming at this time and that present livestock could be fed, if proteins were conserved. However, plans were not fully worked out for relieving the protein shortage in the Southeast.

The Extension and other agricultural officials present urged North Carolina farmers to feed just as

efficiently as possible and to make every pound of protein count. Several changes in feed formulas were recommended, to conserve proteins. On account of the large increases in poultry and livestock the demand for proteins in this State is about 70 percent above last year, covering the past four months. Growers were urged to increase their acreage of high protein crops, wherever possible.

### Grower Shoots Three Barreled Gun At Axis

Typical of what North Carolina growers are doing to help win the war, Raymond J. Elliott of Granville County is firing a three barreled gun at the Axis—eggs, poultry and pork. He also has plans

for adding a fourth barrel to his gun. County Agent C. V. Morgan reported to Director I. O. Schaub of the North Carolina State College Extension Service that Elliott had 500 one week old chicks, 710 4-week chicks, 760 six week chicks and 550 chicks about two months old. Not content with this, Elliott has placed orders for two more shipments of 750 and 1,100 chicks to come at an early date. Also, he had 490 pedigreed laying hens on the firing line, bringing in large baskets of eggs every day.

In many sections of North Carolina, there is only about one brood sow to each ten to twenty families. Elliott wanted to make the swine barrel on his gun extra large, so he has put in six brood sows and is furnishing feeder pigs for neighboring farmers.

Not content with his egg, poultry and pork ammunition, he secured some heifers, which he is developing into good dairy cows and soon they will start furnishing milk for the milk route that runs by his farm.

County Agent Morgan said that all Granville County farmers are enthusiastic in the production of more food and feed crops this year

and that he was sure that this section would exceed the war goals requested. He is urging Granville farmers to grow an increase in acreage of the leguminous crops that bring good hays and the oil bearing crops for plenty of protein meals.

Since there is a serious shortage of protein feeds, all cottonseed and other oil meals should go for animal feeding at this time.

## What kind of a house would you put here?

**A**FTER THE WAR, somebody's going to put up a new house on that pretty rise of ground that overlooks the river bend just outside of the town line. Nothing elaborate. Just a pretty little house snuggled into the trees as though it belonged there.

Somebody else may buy the old Ward farm. There should be many a good day's hunting in those rolling fields and back through the woods over to the State road. Fixed up a little bit—and it shouldn't take much money—it would be a livable place for a man and his family.

Yes, somebody's going to buy it. Somebody's always coming along, with a dream and a little

money, and doing the things we'd promised ourselves we'd do someday.

But this time, why can't that "somebody" be you?

Look... Suppose you put 10 percent of your pay into War Bonds. At least 10 percent—more if you possibly can. And keep putting it away—putting it away—putting it away. Week after week—payday after payday. Here's what happens:

Before you know it, you get so you hardly miss that money. And if you do miss it, you've got something better to replace it—the knowledge that you, personally, are helping to insure a steady flow of planes and tanks and guns to the men who

fight. The knowledge that you, personally, have toed the mark and are helping to win the war.

Then, one of these days, when peace has come again, the money you've put away starts coming back to you. And bringing more money with it—you get four dollars for every three that you put in!

When that day comes, you can get out your pencil and start figuring just what kind of a house you'll put on the river bend.

But to be sure that day *does* come, you'd better do this: You'd better get out your pencil right now and start figuring how you can save at least 10 percent of every single pay check with U. S. War Bonds!

## SAVE WITH U.S. WAR BONDS EVERYBODY...EVERY PAYDAY...
