The other day while I was buying my groceries I noticed two women standing at the bread counter pinching each loaf one by one.

I commented on this to my grocer and asked him if he would explain it to me. He smiled and said, "When bread first came into popularity many years ago, bakers made every effort to deliver it oven-fresh to local grocers. But packing and distribution methods were slow, so very often the bread became stale and hard—and that's where bread-pinching came in... women looking for fresh bread gave each loaf an experimental pinch trying to find the freshest loaf."

My readers should know that "bread-pinching" is definitely old-fashioned. You see, modern bakers use waxed paper for wrapping each loaf. This automatically keeps it in the freshness. Modern-minded shoppers know that bread wrapped in waxed paper is always fresh bread.

I wish I could tell this to every woman I see pinching a loaf. And another thing I've learned myself—after that loaf is opened, it should be carefully re-closed in the waxed paper to keep it fresh longer. Cereals and crackers, too, should be carefully re-closed. The inner wrap of cereal and cracker boxes is waxed paper. After a serving, re-close the inner waxed paper lining. You'll find it will keep its last serving fresh and tasty. I can tell you frankly that I've learned from my own experience, bread is on my list of things that must be bought wrapped in waxed paper—and kept wrapped in waxed paper.
