

**KLAN MOCKERY** — San Francisco: Mocking the Ku Klux Klan, members of the civil rights, church and labor union groups staged a massive anti-Goldwater parade July 12th, waving signs identifying themselves as "Grand Imperial Wizards for Goldwater." They wore pillow cases with eye holes cut out in another mockery of the hooded order. (UPI PHOTO).

**Thwarted In A Robbery Attempt**

CHICAGO (AP)—Henry West, 23, set out to rob a South Side currency exchange here last week, armed with a gun, small knife, hatchet, and a stocking mask. He crawled through a coal chute leading to a drug store next door, cut a hole through the adjoining wall and used a ventilating shaft to enter the back room of the currency exchange.

Once inside, he waited patiently for several hours until Mrs. Margaritha Logan arrived at 9 a. m. to open up. Her husband, who quickly sensed that someone was inside after his wife had entered, called police.

In the meantime, Mrs. Logan locked herself in the cashier's cage until police came.

The police fired shots and tear gas into the currency exchange.

The parents of that nine-month-old boy with "shock of tan" had it easy. He won't barefoot.

Millions of American mothers and fathers have not been so fortunate; they have had to contend with far too many trips to the shoe store and far too frequent shoe shining sessions.

However, after five years of research sponsored by a group of U. S. tanners, a new chemical product has been developed which will give leather a remarkable resistance to scuffing and cracking.

Called "Titekote," this urethane compound is the first major breakthrough in leather treatment in two decades.

Shoes treated with it could be called "child-proof." You've seen kids' shoes that looked as if their toes were put to the grinder? That can't happen with Titekote. The new compound allows shoes to retain their attractive appearance until the youngsters have out-grown them.

Louis Stahl, president of Stahl Finish Company, Inc., Peabody, Mass., producer of the compound, says leather treated with the new product acquires its remarkable properties because the urethane compound is actually absorbed into and becomes part of the leather.

Titekote-treated shoes are impossible to distinguish from regular leather footwear except in performance. And, unlike expensive shoes made from synthetic materials, these shoes cost no more than those made of ordinary leather.

**MISS DEB**

... answer questions about Junior Miss etiquette, grooming and interests.

**Q.** I guess the beach is out for me this summer. I look just scrawny in last year's shorts and swimminis. My weight hasn't changed, but my legs sure have. Help, help with some speedy slimming exercises.

**A.** This calls for immediate action if you're going to shape up for summer socializing. These spot exercises will help if you set aside a few minutes of each day as exercise time and not let anything interfere. Repeat the exercises just two or three times the first day, gradually working up to 10 or 15 or 25 repeats.

**Ready? First, the Knee Bend.** Stand with feet pointed straight ahead, arms at sides. Simultaneously raise your arms and lift up onto toes. Use arms as a balance and lower yourself into a deep knee bend. Return to position. Now for the Thigh Stretch. Lie flat, with arms straight out at your sides. Holding your knees rigid, lift legs straight up and stretch apart as far as possible. Repeat. Don't expect miracles, but it won't be long before you see results of your "trim look" campaign!

**Q.** I love the look of kids white gloves with summer dresses — except when it comes to shaking hands. Then I never know if "on" or "off" is right. I usually get caught in the middle of de-gloving and feel like an awkward oaf. What's right?

**A.** Agreed that sparkling clean white gloves peek up hot-weather outfits! We love 'em too! They stay on for handshakes. And no apologies are necessary. One "must" though,

is that your white cotton gloves be immaculate everytime you put them on. Wash them after each wearing (it takes only a minute or two, then roll in a towel.) To make sure they dry overnight, unroll and shake out. Then stuff a Kleenex tissue or two in the palm of each glove. This helps the air circulate through the fabric. They'll dry in a jiffy.

**Q.** Several times when I've been babysitting with preschoolers, they start to cry as soon as their parents leave. One little boy, especially, cries for at least half an hour. The children always quiet down eventually, but what can I do to shorten the "good-by tears" time.

**A.** Keep calm! You've encountered one of the occupational hazards of babysitting. It will help to cut the duration of "lonesome" tears and tantrums if you don't panic. Let the child know you're sympathetic. It's also comforting to tell him when his parents are planning to return. As soon as possible, create a diversion — a new game or a story telling session. Never show any anger or try to frighten or threaten the child. He'll calm down much faster if you're calm too. And, if all other methods fail, call his parents.

**MAIN SPEAKER** — Dr. A. R. Edwards, left, deputy assistant secretary of Agriculture, U. S. Department of Agriculture, Washington, D. C., who delivered the keynote address last week at the annual Conference of North Carolina Teachers of Vocational Agriculture at A&T College, talks with Dr. Burtleigh C. Webb, center dean of the A&T School of Agriculture, and W. T. Johnson, Sr., district supervisor of Vocational Agriculture.

**GARDEN TIME**

A request has been received concerning the proper method of handling red raspberry plants after the fruiting period has been completed. Since there is similarity in the handling of black raspberry and dewberry plants we might as well give attention to all three.

The red raspberry: Old fruiting canes should be removed immediately after the crop is harvested. Cut the old canes close to the ground. New canes (suckers) will come from root buds.

If you are using the hedge-row system of training, do not let rows become wider than about two feet. This can be done by cutting out (roots and all) suckers as they appear. If you are using the hill system, save 8-10 canes for the 1965 crop around each stake.

The black raspberry: Remove the old fruiting canes after harvest. This plant does not "sucker" from root buds as the new canes originate at the base or crown of the plant. When the new canes are two or three feet in height, pinch out the tip of each new cane. This will destroy apical dominance and cause branching. Branching is desirable for two reasons: in the first place pinching will result in a low stocky plant; and secondly, the yield should be better the following year.

The dewberry: Old fruiting canes should be removed after harvest as was the case with the red and black raspberries. There are two methods employed depending upon where your planting is located in the state.

In the lower Piedmont and Coastal Plain, all canes (old and new) are removed at the crown or base of the plant. The growing season in these regions is long enough to produce sufficient new canes for a good crop in 1965. This procedure also assists in reducing the severity of disease organisms.

In the mountains, where the growing season is shorter, it is best to remove only the old fruiting canes.

All plants should be cultivated and fertilized after post-harvest treatments as suggested. About 10 ounces of an 8-8-8 fertilizer per plant should be applied evenly around the plants and incorporated with the soil.

**IT'S A FACT!**

It's a presidential election year for both the United States and Mexico. Mexico's voters will be electing a new Congress as well as a new President in an atmosphere of political calm and economic progress.

Elected on the first Sunday in July, the Mexican President takes the oath of office on December 1st. He is elected by popular vote, serves one six-year term, can never be elected again.

Favored to win the Presidency is the candidate of the majority Party of Revolutionary Institutions (PRI), Gustavo Diaz Ordaz, Secretary of the Interior in the present administration. So popular a choice is the 52-year-old Mr. Diaz Ordaz that most of the opposition parties have endorsed his candidacy. Only the conservative National Action Party (PAN) is running a candidate, 44-year-old Dr. Gonzalez Torres, against him. The other parties are running competing slates of candidates in the congressional and gubernatorial races, however.

Mexican women first voted in 1955 and elected the first four of their sex ever to serve in Congress. This year, the PRI alone is running two women candidates for the Senate and eight for the House of Deputies.

**TWINS TAKE TEN** — Mindful of the summer heat at North Carolina College these twin sisters pick a shady spot on the college's Durham campus to do some out-of-doors studying during a break. Yvonne Marie, left, and Evelyn Frances Suitt, 17, are beginning freshmen at the college enrolled in the summer session. Their older sister, Mrs. Marian Wright, Jr., earned her bachelor's degree at NCC in 1936 and is also enrolled for the summer session as a graduate student. The twins commute to the campus from their home in Creedmoor.
