

Government

WITH drastic changes taking place in the governments of nations, much attention is turned in these days to forms of government and to discussions of various types of government.

Christian Science has much to say about government. Mary Baker Eddy, the Discoverer and Founder of Christian Science, speaks often of God's government of man.

Through the ages mortals have sought freedom to think according to the dictates of their own conscience, freedom to act according to their own best judgment, and freedom to govern their affairs righteously without interference from others or from the state.

For a long time mortals have sought freedom from tyranny, freedom from slavery, freedom from oppression and depression, freedom from sin and from sickness.

Whatever may be the seeming influence or unrighteous government, there is a way of escape and a means of correction.

Jesus sought beyond his human personality for direction and government. By his constant recognition of his true, spiritual selfhood, which was ever existing with God, and by his obedience to God's government, Jesus was able at all times to prove his freedom from wrong influences and unrighteous control.

The Week in Washington

A RESUME OF GOVERNMENTAL HAPPENINGS IN THE NATIONAL CAPITAL

Washington, D. C.—The United States has more aircraft than any other nation, more than twice as many miles in regular air routes for passengers and merchandise, and its aviators fly more than 50 million miles a year, which is more than twice the mileage flown by the armies or any other nation.

That is the summary of the report of the War Department's special aviation committee, headed by Newton D. Baker, former Secretary of War, and including ten other distinguished men, civilian and military.

No scandals were uncovered by the committee, nothing but the refusal of Congress to give the Army the money it asked for to buy planes and train its officers and enlisted men to fly.

Dirigibles and Planes Nothing is said in the report about dirigibles. There is a lot of talk going around that the great dirigibles, like the Los Angeles and the Macon, are failures.

It looks now as if the next Congress will be urged to request to authorize the building of 2,320 Army airplanes, the number that the Baker committee recommends as necessary.

This Baker report is significant in that it suggests, without saying so, that international relations between the United States and other nations are not all that they should be.

The United States and other nations are not all that they should be. Nobody mentions Japan when talking about the next war—not for publication, at any rate—but a lot of people are casting more attentive eyes toward the Pacific than at any time in our history.

That situation is not allayed by the growing restiveness of business men and manufacturers, expressed in some rather hot communications to Administration officials, over the continuing invasion of our markets by cheap Japanese goods.

The whole scheme of the tariff is under intensive study, by the State Department and other Federal offices. Secretary Wallace is working closely with Secretary Hull in planning where and by how much to reduce tariffs.

The policy on tariffs, so far as any part of it has been disclosed, is to ditch the old "protective" tariff principle entirely, and by letting foreign goods in free of duty or nearly so, create reciprocal markets for American surplus in the countries so favored.

As it is figured out here, we must lure in about \$200,000,000 a year more of foreign goods than we now import, in the hope of selling more than that volume of American goods abroad.

As those who are watching this matter closely believe, agricultural products will not gain anything in export trade by any scheme of international agreement, and that belief is largely back of the Administration's effort to reduce agricultural production to domestic demands.

Most houses cost too much. Everybody who has given serious study to the subject of housing agrees to that. Better houses can be built for less money, and the day is coming when everyone will realize that.

On the other hand, many houses cost little enough. I read the other day of a family in Serbia that built itself a new house for 16 cents! That was all the money they spent, and it went for window-glass.

Some of my country neighbors have done almost the same thing. Good houses, too, they have constructed with their own hands. That was the way almost every house in America was built, in the pioneer days, and some of them are still livable.

GOVERNMENT TO BROADCAST TALKS ON SOIL EROSION

"Fighting Soil Erosion" is the subject of a series of ten-minute talks that the government has arranged to broadcast over Station WBT, Charlotte, beginning Thursday evening, August 9th, from 6:35 to 6:45.

The talks will be made by soil erosion control specialists of the soil erosion service, United States Department of Interior, who have been assigned to carry on large demonstration soil-saving projects in the Carolinas.

After this week the speakers will be heard on Tuesdays, August 14, 21, and 28, and September 4, from 7:05 to 7:15.

Erosion-control demonstrations in the North Carolina area comprise the 137,000-acre upper Deep River watershed of Forsyth, Guilford and Randolph Counties, and the Brown Creek watershed of Anson and Union counties, and Chesterfield County, South Carolina.

Experienced government erosion specialists assure us that soil washing can be prevented.
