A Clean Stove Saves Fuel

The easy way to clean an oven. Leave a bowl of soapy water and ammonia in the oven overnight with the door shut tight. Next morning, scrub the interior with a stiff brush. Dirt and grease wash off easily, thanks to pre-softening.
 These are days of hearty meals and much home entertainment—and time to check the efficiency of your kitchen to save you time and money. A good start is the kitchen range.
 Sputtering burners and smoky ovens are signs of trouble and wasted fuel. A good rule to follow is "a clean stove cooks better, saves fuel and lasts longer." But don't make a chore of it. Keep your stove in working order. Like the proverbial "stitch-in-time," constant care saves hours of hard labor.
 Wipe the top and burners with a soapy cloth after each use, but let the stove cool first. Enamel may crack if water is applied while hot. However, wipe up spills with a damp cloth or paper towel, lest they leave permanent stains. Follow with soap and water when the stove has cooled.
 To keep carbon from jamming the pilot light, first turn it off, then scrub the housing with a soft wire brush and wash with a soapy cloth. Make sure surrounding surfaces are completely dry before you relight it, and that connections are "seated" correctly.
 Pour grease off the broiler while it is still warm, but let it cool before you soak and scrub it in hot soapsuds. Rub mineral oil on the racks occasionally and they'll resist rust better and longer.
 Treat the deep well cooker as you would any aluminum kettle. Lift it out and scrub with hot soapsuds, particularly along the outer edges. Non-insulated covers can be tub-washed, but insulated covers should just be wiped clean with a damp cloth.
