Color TV On Way; May Be In Wide Use Soon By EDWARD H. SIMS

tions Commissioner Paul Races Mirrors ner Paul A. Walker says the Commission was impressed with the improv-ed color picture obtained in re-cent tests of the electronic tube m. This is the system which be received on either new receivers or present-day and white sets. It is the system which manufacturers have would be perfected, so that TV sets already sold would not be made obsolete when color transmission begins.

The former chairman of the the Commission said color television is definitely on its way. However, he scotched reports that color TV sets would be in widespread use by early 1954. Asked to express his opinion when color TV would begin, Walker said it might "possibly" be within two years.

"The color picture we recently saw was much improved. The picture is now somewhat in line with the testimony two years as to what it was supposed ago, to be then. But until it is further tested, there will be no hearings or requests from manufacturers for permission to construct color TV equipment. The field test (of the new color system) is a long, tedious process. It will have to be tested under actual operating conditions. We want to be deadsure the purchaser is satisfied after he buys a set," Walker said. Asked if the new system's color picture was as clear as today's black and white TV picture, Walker replied by withholding comment on that question at this

time. He did say he thought there to how large TV was a limit as to how large TV screens would be-for home use And he pointed out that in color TV, the larger the screen the tougher the job to get a perfectly detailed picture, since there were so many more details seen in a larger picture. Telling how color television

will come of age, Walker explained these sometimes-unknown facts:

"In the color TV field, there is a committee representing all the manufacturers. It's called NTSC. All the big manufacturers are now making tests, and there will be field tests of all the systems, The RCA system will probably not vary much from many of the others.

"These field tests will probably be held within the next six months. The system to be manufactured has to have the support of a majority of manufacturers. Every day that passes, it's harder to sell an incompatible system." (Here Walker refers to a mechanical wheel system, which produced a clear-enough picture to get the Commission's green light two years ago, but because of its limitations, especially the fact that present-day black and white receivers could not receive any picture from the transmissions. manufacturers were reluctant to go into production.)

Walker's statement the From reader can see that color TV will not be here by Christmas, and maybe not by Christmas, 1954. But by this Christmas field tests will probably have been held and manufacturers might be geting set to go into color TV pro

deal.

Of Character By DR. SOPHIA BRUNSON People who are intelligent, and whose thoughts ran upon noble achievement and are benevolent and kind acquire, countenances that bespeak superior men and women. As the years pass, their facet grow in charm not possessed

in youth. Those who spend their time in the pursuit of shallow amusethe pursuit of shallow amuse-ments, who depend for pleasure upon that which pampers their vanity and affords passing enter-tainment, soon lose the the at-traction that they had in youth. Their faces become fat and heavy, with inane, stupid expressions or else they grow thin, sharp and pinched, like their characters. Many of them betray the disap-pointment and discontent that posses them. Time has been busy etching their emotions and habits

on their features. The girl who is good natured and jolly, whose merry laugh falls pleasantly upon the ear, is sought as a companion far more frequently than one who has on-ly good looks to recommend her. Madame de Sevign, who lived during the reign of Louis XIV, exercised great influence upon the political and social world. She was extremely popular on account of her brilliant mind, gracious manner and kind heart. Her daughter, though much more beautiful than her mother, was greatly disliked, because she was so selfish and indifferent to the interest and happiness of those about her.

Madame de Stael of the First French Empire was really ugly, but so brilliant was her intellect, that her wit scintillated and enlivened any conversation in which she took part. One of the great writers said that when he heard her talk he listened with transport. In her features there

was a charm superior to mere beauty. It came from her gifts of mind and spirit. To prove that the expression is

moulded by environment and habits of thought, we have but to contrast the habitual crook with the philanthropist. The eyes of the former are shifty, cruel and crafty. He is practised in the art of looking for opportunities to carry on his nefarious work or to make his escape from the

clutches of the law. His very features are often distorted with malice, cunning or revenge. He plans and executes crime. He lives in fear and is always plotting wickedness or seeking means of escape from the consequences of his misdemeanors.

What a contrast is presented by the man whose life is honest, open and upright, who is helpful and considerate of his fellowmen. Even a little child or the dog on the street will trust him, while they shrink in terror from the criminal who preys upon society.

Thus people show in their faces what they are. Their lives are written upon their countenances. So we create our beauty as the years pass, by our thoughts and habits.
