Poultry, Egg **Prices May** Drop In '66

may slip a little toward the end of 1966. This is indicated by conditions that favor expanded production in the early part o

the new year.

If this anticipated expansion occurs, North Carolina State University economists foresee some downward fluctuation in prices as compared to prices received a year earlier. Higher egg prices were an-ticipated for late 1965 and early

1966 as prospects of lower feed prices stimulate expansion of "Increased production may

limit the season rise in egg prices below the 1965 level by the last quarter," says the econ

Looking backward, low egg prices early in 65 brought about a seven per cent reduction in the number of flock replacements. The number was down by about two million birds from In 1966, broiler production

began about 10 per cent above a year earlier. The market was unusually strong in 1965 due to ess competition from red meats and a rise in consumer income Demand for broilers will benefit from shrinking red meat supplies through the first half of 1966. Greater production may cause prices to drop

below year earlier levels. The N. C. State economist add that lower prices may slow expansion late in the year Competition from red meat supplies will increase by late 1966

As for turkeys, higher prices and lower production costs have set the stage for an increase in production. The 1966 crop will exceed the record 1961 crop. Competition will increase in early 1966 from broilers and late 1966 from beef and pork "If expected expansion occurs, producer prices will likely average below the 22 cents currently estimated for 1965."

Fruit, Vegetable **Growers To Face Bigger Demand**

North Carolina fruit and vegetable producers are expected to share in the increased demand for food caused by population and income growth. Economists at North Carolin State University at Raleigh in clude in their 1966 outlook r port a forecast for slightly higher seasonal prices for many fruit and vegetable items in the remainder of the 1965-66 marketing year. This should include canne

vegetables as a group and spe ficially corn, pickles, tomatoes tomato products and asparagus Slightly higher prices during the same period are in prospec for canned and frozen decide ous fruit in general and canne peaches and frozen strawberrie in particular.

"This should provide a strong er demand for these commod ties for the 1966 North Caro lina crop year," the N. C. State Good quality fresh apple

will command seasonally strong prices. Cured sweet potato prices in early 1966 should be slightly below normal because shippers and storers have withheld heavy stocks in their efforts to raise prices.

The economists point The economists point out that, with average weather conditions nationally and favorable labor supply in Nonth Carolina, growers should realize above average revenue from larger supplies of Tar Heel apples, strawberries, pickling cucumbers and vine-ripened tomatoes.

The long-term outlook for fruits and vegetables at least temporarily places North Carolina in a favorable position, due largely to a favorable I a b o r situation and shifts in production centers.

tion centers.

The state has an edge over some areas in labor available to harvest its crops of vine-ripened tomatoes, sweet potatoes, strawberries, blueberries, peaches and apples.

Garden

Time

BY M. E. GARDNER

Last week I began the an nouncement of the All-America. Dower and vegetable selections for 1966. We had only space to describe two, cosmos "Sunset" and pansy "Majestic White with Blotch". We continue.

Pansy "Giant Majestic Mixed" is a carefully blended formula mixture of many security.

mula mixture of many separate F1 hybrid colors or varieties

ncluding the "White with

Blotch". This formula provides a well-balanced color mixture,

all new giant varieties with

striking blotches, never before offered. With the same vigor-

ous plants, free blooming even in hot weather, those who desire

striking assorted colors and largest flowers on sturdiest plants will delight in 'Giant Majestic Mixed'. Start seeds of

pansies early and set out plant

as early in spring as soil can be worked in cold areas. They are usually hardy through most

southern winters. Sweet William "Red Mon

arch" blooms as an annual. It is the first and only self or

solid red Sweet William. It is

sown in early spring for sum-mer blooming, or in the fall for

early spring blooming. Flowers of rich scarlet red with white

stamens are borne in well

rounded clusters surmounting

erect healthy green plants.

reaches about 10 inch heigh

from spring sowing, about 16

inches from autumn sowing. Usually a biennial bedding

flower, 'Red Monarch' also

brings us a highly useful cut

Snapdragon "Bright Butter-

flies" is a formula mixture of

separate F1 hybrid colors or

garden snaps. The wide and well balanced blending of col-

ors really resembles a garden

of bright butterflies. Instead o

the tubular throated snapdrag

ons, these are open faced, the

dwarf Peloric or Juliwa type as

known in Europe. But, with Bright Butterflies, we have vigorous hybrids of three-foot

height, midsummer blooming

like the previously awarded

Rocket snaps, with long spikes

of open faced flowers. Stocky

base branching plants produce to a dozen frolar spires. Cut

back after blooming or cutting, they produce a second or third crop of flowers during the sea-

son. They should make snap-

Verbena "Amethyst." Call-

ed mid-blue, this is the new and

only sky-blue dwarf compact

verbena. Flattish flower clust

ers of 2 3/4 inch diameter near

ly blanket the cushion-like 10-15 inch spread of six-inch

plants. Most everybody wants

blue flowers and there are so

few, especially low and com-

pactly growing for edging walks, patios, borders and for

low beds. Here they are, uni form and neat, cool and invit

ing. Edge a border or bed of

marigold "Spun Yellow" wifh
