STOP THE LEAKS

GUY A. CARDWELL, General Agricultural Agent, Atlantic Coast Line Railroad Co.

Improved farm income is to some extent within the control of every farmer. Numbers of farmers are still making a comfortable living farming. A study of these cases will show that these successes have been made by men and women who have taken the time to make a close study of conditions, and who have applied skillful methods to farm operations.

I grant that farm life has become more complex, but this is also true of almost every occupation. In view of this, those farmers who succeed in keeping income in line with the cost of living are compelled to apply their best efforts to the stoppage of leaks.

Among the leaks that can be stopped in some measure are insect pests and plant disease, both of which have gained a firm hold on the crops of this section.

There are chewing insects and sucking insects by the hundreds of thousands which parasitically feast on host crops. We should use the most effective poisons and economical methods in fighting to dislodge and destroy these robbers.

Plant diseases are also well entrenched and take their toll of both cash and subsistence crops.

During the winter season some time might well be spent by individual farmers and farmers in groups in the study of insect and plant disease

for market.

A happy state of affairs would be to have an active demand for all crops produced, at good prices; and yet at prices that consumers could well afford to pay; but this combination of circumstances does not always prevail and when it does not prevail the farmer must exercise his intelligence and ingenuity both in production and in marketing if he is to receive a satisfactory profit from a price level that will encourage maximum consumer buying.

Tobacco Course To Be Given At State

The four-day tobacco short course to be held at State College, January 25-28, will offer North Carolina farmers an opportunity for extensive studies of tobacco production and marketing.

Leading authorities on the weed crop will discuss the best cultural practices, new methods of insect and disease control, how to market leaf to best advantage, and explain the tobacco outlook for this year.

Laboratory work in grading tobacco will be given Wednesday and Thursday afternoons.

A high-light of the first day's program Tuesday morning will be a talk by J. B. Hutson, assistant AAA administrator and director of the east central region, on prospective control legislation.

W. G. Finn, assistant regional director, will go into the leaf outlook, and E. Y. Floyd, extension tobacco specialist and state AAA director, will discuss the 1938 agricultural conservation program in the afternoon Tuesday.

Plant pathologists, agronomists, entomologists, marketing specialists, and other experiment station and extension workers are also on the program to present various aspects of

Singing Cowboy

Smith Ballew, singing cowboy of the screen, introduces three new song hits in "Hawaiian Buckaroo," his latest release. At the Taylor Theatre, Edenton, Saturday.

the tobacco growers' problem and point out the best known methods of solving them.

Dan M. Paul, State College director of agricultural short courses, has announced that there will be no tuition fee for the tobacco short course. A \$1 registration fee will be charged.

Rooms and meals will be available at a moderate price both on the campus and in homes close by, he added.

DANGEROUS

It is dangerous to sell a SUBSTITUTE for 666 just to make three or four cents more. Customers are your best assets; lose them and you lose your business. 666 is worth three or four times as much as a SUBSTITUTE.

SALT! SALT! SALT!
