

Extension Forester Aids In Selective Cutting Of Timber

Vernon Boyce Is Shown How to Greatly Increase Revenue

Through the assistance of J. C. Jones, Extension forester, one acre of pine woods was marked last week for selective cutting and timber stand improvement. This demonstration is being conducted with J. Elton Jordan in the Center Hill community.

On visiting Vernon Boyce of the Center Hill community it was found that he was planning to sell approximately 15 acres of young pine timber for pulp wood. A pulp company representative had visited Mr. Boyce and offered him \$500 for the tract with the understanding that a clean cutting operation would be followed except for four seed trees to be left

RESOLUTIONS OF RESPECT FOR GEORGE C. WOOD (DECEASED)

WHEREAS, the Lord, in his infinite wisdom, has seen fit to take away from our midst one of our most esteemed and valued citizens in the person of George C. Wood;

AND WHEREAS, the said George C. Wood was for years a faithful and trusted director of the Edenton Peanut Company;

NOW, THEREFORE, we, the directors of the Edenton Peanut Company, do hereby offer these resolutions of respect to his family and friends and business associates. It is further

RESOLVED, that a copy of these resolutions be spread upon the minutes of the Company, and that copies of same be transmitted to the family and to the local press for publication.

This 14th day of September, 1948.
DIRECTORS OF EDENTON PEANUT COMPANY.

Resolutions Committee.

per acre. Through the assistance of Mr. Jones, an estimate was made of the volume of pulp wood contained on the tract and found the figure to be somewhere around 275 to 300 cords. A one-acre plot was then measured off and trees marked that should come out for a good thinning, leaving a good stand of the best pines to grow into timber.

The thinning would amount to 8 to 10 cords per acre. It was then pointed out to Mr. Boyce that by cutting the pulp wood himself and selling it at \$6.00 per cord on the ground in the woods, the price paid for pulp wood in that area, he should obtain a return of \$800 to \$900. It was estimated that he could cut at least two cords of pulp wood a day by himself and by thus working over his woods he would be able to earn approximately \$35 per week above the stumpage price of \$2.50 per cord for pulp wood and still leave a good stand of nice pines to grow. If he cuts it clean he will lose the present 23 years growth on this timber, which in 20 to 25 years will be good merchantable saw logs, setting back his next crop of timber at least 50 years to reach merchantable size.

Demonstrations On Two Chowan Farms

Inoculating Seed And Permanent Pasture Completed

Method demonstrations on inoculating Ladino clover seed and seeding a permanent pasture were conducted with George W. Bunch of the Cross Roads community and Lloyd Burton of the Yeopim community last week.

On the Bunch farm cottonseed meal was used as a filler or spreader to mix the Ladino clover for seeding. This was sown on a scarified Bermuda grass pasture where the Bermuda will furnish the grass to go with the clover. On the Burton farm

the inoculated Ladino clover seed was mixed with land plaster as a carrier, Alta Fescue was then added and thoroughly mixed. By using a carrier for the Ladino clover seed it is found there is sufficient bulk to provide an even distribution of the seed and in the case where grass seed is mixed the mixture will maintain its consistency and not let the clover seed sift to the bottom. A cyclone seeder was used for seeding both pastures.

Statement of the Ownership, Management and Circulation Required by the Act of Congress of August 24, 1912, as Amended by the Acts of March 3, 1933, and July 2, 1946 (39 U. S. C. 233)
