

Cut High Cost Of Living And Enjoy It

Drive Slowly and Reduce Cost as Well as Accident Risk

Here's how you can cut the high cost of living—and enjoy it, too!

Just drive a little more slowly—around town and when you go on trips.

You will save gasoline, oil, wear and tear on your tires, and most important of all, some of the risk of an accident to your car, yourself, your passengers, and other folk who use the streets, according to L. R. Fisher, acting head of the Highway Safety Division of the North Carolina Department of Motor Vehicles.

"The trite old saying that haste makes waste is especially true when we drive our cars," Fisher said.

"Not only does speed—that is, haste—increase the risk of an accident, it actually costs more in dollars and cents to drive at high speeds. You'll use about one-third more gasoline cruising at a top speed of 60 miles an hour as compared to a top speed of 40. You'll use about four times as much oil, and your tires will wear out two and a half times as fast. That's how fast haste can make waste."

"And what do you gain? An average of about 15 miles per hour—plus the greatly increased risk of an accident that might cost a big repair bill, painful and expensive injuries—or your life."

Fisher gave these figures in connection with the campaign for safer speeds, this month's Operation Safety program sponsored during June by the Department as a part of its continuing traffic safety program.

New Insurance Plan Against Polio Formed

Financial Protection For Families Against Disease

A new insurance coverage providing financial protection to individuals and families against the dread disease, Poliomyelitis, has been made available to the Public by the Farm Bureau Mutual Automobile Insurance Company. Bowman Doss, agency vice-president, announced that the policy covers expenses for hospital care, iron lung, medical care, nurses' care, transportation and ambulance service.

In addition to these, the company has broadened the policy to include board and room expenses for a member of the family who wishes to be near the afflicted person during the period of hospital confinement.

The new coverage was instituted after results in a poll taken among the companies' 3,000-member agency force showed a need for such protection.

In an announcement to field personnel, Doss urged that the utmost cooperation be given to the national foundation for Infantile Paralysis and other local organizations in their public programs to combat the disease. Referring to recent developments in the scientific research being conducted to find a preventative, Doss said that "Only through full public cooperation with scientific groups will we eventually dissipate this fear that plagues all of us."

The new polio policy is being offered locally by Goldie Layton, Edenton, N. C., local agent for the company.

Surplus Potatoes Available For Food

Can Be Obtained By Contacting J. M. Price In PMA Office

County Agent C. W. Overman announces that surplus potatoes are available to farmers for livestock feeding. These potatoes may be obtained through the PMA office, of which J. M. Price is Chief Clerk.

Mr. Price says that the cost of po-

tatoes at Elizabeth City is six cents per hundred pounds in bulk and 16 cents per 100 pounds in used bags.

Farmers wishing to purchase surplus potatoes for livestock feeding will have to contact Mr. Price, make a deposit for the potatoes and should get a slip to take with them. Potatoes can be obtained in truck load lots, preferably lots of 100 bags.

In feeding surplus potatoes the greatest food value will be obtained by cooking the potatoes. However, hogs will eat the potatoes raw. Since it takes about 5 pounds of potatoes to equal one pound of corn in feed value, it is important to let potatoes constitute only about one-half the feed ration. In other words, potatoes may be fed in the morning and corn in the afternoon or the reverse. Two hundred pounds of potatoes are about equal in food value to one bushel of corn. Therefore the cost of 250 pounds of potatoes in used bags will be approximately 87½ cents, which is cheap feed. Potatoes may also be fed to cattle and work stock but should be chopped up to prevent choking.

Disease Hitting Chowan Tobacco

Growers Plan Visit To Experiment Station July 7

Diseases are showing up in quite a number of tobacco fields, according to County Agent C. W. Overman.

Mostly the diseases are found to be either Black Shank or Sore Shin. The Sore Shin disease is attributed mainly to the wet weather after setting. The Black Shank disease is showing up in many fields and can only be combated by crop rotation and the use of disease resistant varieties.

Arrangements have been made for Chowan County tobacco growers to visit the Oxford Experiment Station at 1:30 P. M., on Friday, July 7. Plans are to leave from the County Agent's office at 9:30 that morning. At the Experiment Station farmers can observe the many experiments being conducted in the production and curing of tobacco.

Particularly important are the variety tests where growers may observe disease resistant varieties and determine which ones they think they will like best.

SAVE THE ENORMOUS COMMISSION

Mr. Price says that the cost of po-

tatoes at Elizabeth City is six cents per hundred pounds in bulk and 16 cents per 100 pounds in used bags.

Particular care must be taken during the hot summer months.

This powder contains varying amounts of rotonone, about five percent on the average.

In using this strength powder as a dip, dissolve one ounce of soap in one gallon of water,

add two to four ounces of the powder.

The powder's effects will last longer

in a solution than in powdered form,

but the solution should be kept in a lightproof container, as its strength

rapidly deteriorates in sunlight. After applying the solution to the dog's coat, do not rinse it off.

Derris powder is especially effective

in the control of external parasites. This powder contains varying amounts of rotonone, about five percent on the average.

In using this strength powder as a dip, dissolve one ounce of soap in one gallon of water,

add two to four ounces of the powder.

three or four or more dogs, dips of

a disinfecting and antiseptic nature

are quite important in the summer.

During this period, dogs that are kept

confined in kennel yards should be

dipped every week in a sulphur solu-

tion. Such a dip is made as follows:

Fill a fifty-gallon barrel about three

quarters full of water. Empty two

one-pound cans of Lewis lye into an

earthen crock or vessel. Over this

pour several cans of water, stir until

lye is dissolved. Into this mixture

pour five pounds of sulphur which has

been screened to eliminate the lumps.

Stir until the mixture turns a reddish color and then dissolve in a bucket of hot water. Add mixture to the barrel and stir thoroughly.

After this dip has been used several times, add a small glass of kerosene.

Keep covered at all times. It should

be replaced with fresh material about

every three weeks. Be careful to

keep the mixture away from the dog's

eyes or ears.

After dipping the dog, dry him

thoroughly with a rough towel, or

turn him loose on a grassy lawn and

let him roll.
