Boll Weevil Finding Way To Cotton Fields County Agent Overman Finds Little Damage Thus Far

According to County Agent C. W. Overman the boll weevil is migrating to Chowan fields but not doing much damage. Several fields were examined last week, and an average was found one weevil to three hundred plants.

much greater infestation there is no need to dust until the squares are large enough to be punctured, which will be about June 15 to 20," says Mr. Overman. "Each grower should examine his field carefully for weevils. If no weevils are found, don't dust until they are found. Generally, though, it will be wise to start dusting June 15 to 20. Dust every seven days for three applications. Then examine 100 to 200 squares (on plants, not on the ground) scattered over your field each week. When you find eight or more punctured squares in the 100 examined make at least three more weekly applications."

Death isn't too bad; it's the process of dying.

Experience Necessary

"Madam," said the new caretaker to the lady who had just employed him, "I want to thank you for giving me the job, and ask you one question. I notice that you advertised for a married man. Does that mean you will have some work in your home for my wife?"

"Oh no," replied the woman, "I wanted a married man so as to be sure I'd get someone used to taking orders from a woman."
