

Peanut Association President Explains Plans For Growers

Series of Educational Meetings Held In Various Parts of State

C. S. Alexander, of Scotland Neck, President of the North Carolina Peanut Growers Association, announced this week that educational meetings have been held in all major peanut-producing counties during the past two weeks in preparation for the state-wide Peanut Referendum, which will be held on August 29.

The North Carolina Peanut Growers Association has been authorized by the General Assembly to conduct the referendum, which will enable farmers to vote on the question of whether or not they should levy upon themselves an annual assessment of one-cent per hundred pounds of peanuts marketed for a three year period, 1953, 1954 and 1955. The proceeds from the assessment would be turned over to the association by Commissioner of Agriculture L. Y. Ballentine to be used to promote the interests of North Carolina peanut growers in all phases of production, marketing, processing, consumption and research. This new organization would function in a similar manner to Tobacco Associates, which leaf growers authorized in 1947 under the same law.

Alexander said the meetings explaining the proposed peanut assessment were highly successful, and commended the educational work now being carried on by the county Farm Bureau organizations, the Extension Service, Production and Marketing Administration, Soil Conservation Service, Vocational Agriculture teachers and the Farmer's Home Administration.

"The formation of the N. C. Peanut Growers Association was the result of a resolution passed at the last State Farm Bureau Convention, where delegates decided that peanut producers should have an organization to promote their commodity under the same enabling legislation that tobacco growers have promoted the marketing of their product," Alexander added.

question how many decibels, night after night, the snorer's roommate can take before he is driven into general debility, neurosis, a separate bedroom, or the divorce court.

Short of divorce, what can the suffering victim do? First the doctor should be consulted to find out whether there is any abnormal condition of the palatal tissues, nose, and throat passages which can be corrected. If this possibility is eliminated, the snoring may be caused by too much smoking or drinking, or overweight. In such cases, the snorer must cooperate fully, hard as it may be for him to make sacrifices to get rid of an ailment which doesn't bother him in the slightest.

If minor surgery, antibiotics, and self-control fail to bring quiet to the tortured household, a small pillow under the nape of the neck may turn the trick. If this fails, there are some 300 patented snore-preventing gadgets, from a rubber ball clipped to the snorer's pajama tops to keep him from sleeping on his back to ear plugs for the harrassed mate.

Farm Water Systems Need Good Planning

A carefully planned and efficient water system can save work and speed up farm operations in addition to adding to the comfort, safety and convenience of farm living, says county agent, C. W. Overman.

Mr. Overman points out that it is well to plan for increased consumption in estimating the amount of water that a new or enlarged power system will be called upon to furnish, since experience shows that farm families use more water when it is easily available. It has also been demonstrated that animals gain weight more rapidly and milk cows produce more milk when they are provided with plenty of water at all times.

Agricultural engineers estimate that water will be used at the following rate for each individual served: 50 gallons a day for each member of the family; 35 gallons a day for each milk cow; 12 gallons for each horse, dry cow, or beef cow; four gallons for each hog; two gallons for each sheep; and four gallons for each 100 chickens.

All potential needs or uses should be considered in planning not only the capacity of the water system but the location of pipelines, Mr. Overman says. Hours of labor each day can be eliminated by piping rather than hauling water to livestock quarters. And a strategically located hose can prove invaluable for putting out fires in farm buildings.

MASSES SUNDAY AT EDENTON BASE AND ST. ANN'S CHURCH

Sunday, August 30, the Most Holy Sacrifice of the Mass will be offered in U. S. Marine Corps Auxiliary Landing Field Chapel, near Edenton, on EDT, at 8 and 7:15 A. M., and in St. Ann's Catholic Church, Edenton, on EST, at 11 A. M., each including sermon on "Avarice", Holy Communion, stated Father F. J. McCourt, rector of St. Ann's Missionary Parish and Auxiliary Chaplain to USMCALF. Week-days mass in base chapel at 6:45 A. M., EDT. Confessions for half hour before all masses.

CARD OF THANKS

We, the family of the late Mrs. John E. Dail, do herewith desire to express our thanks to the many friends and neighbors who so kindly helped us during the recent illness and death of our mother. We are deeply grateful for every word of sympathy, for the kind services rendered, and for the beautiful expres-

sions in flowers. We are profoundly grateful to Dr. L. P. Williams and Dr. R. H. Vaughan for their untiring medical aid even though death was so imminent.

We are, indeed, sincerely appreciative of all these acts of Christian kindness, and we assure you they will long live within our memories.

HEALTH FOR ALL

NOISE IN THE NIGHT

Millions of Americans suffer every night from an ailment they don't have themselves. It is probably the only malady known to man that brings anguish to the non-afflicted, without in the least disturbing the afflicted, if that's the right word for the estimated 20,000,000 Americans who snore.

Audiometer readings of uninhibited snorers have gone as high as 40 decibels, about equal to a noisy street corner in the business district. Although doctors do not usually consider snoring a serious ailment, research shows that sounds of much less volume than 40 decibels increase the blood pressure and muscle tension of the nearest sleeper. It is an open

soon pay for themselves . . .

Many farmers report their McCormick cotton pickers slash harvesting costs one half or more! Such big savings enable these cotton pickers to pay for themselves in a hurry.

These speedy machines pick clean, too—leave less cotton than many hand pickers. Growing plants and unopened bolls aren't injured.

Stop in the next time you're in town. Let us show you how a McCormick cotton picker can reduce your cotton harvesting costs and your farming risks.
