

New Wrinkle Will Be Tried To Reduce Speed On Highways

Cameras on Police Cars Will Take Pictures And Record Speed

If you are a chronic traffic law violator you may show up in the movies. According to an announcement made last week by Motor Vehicles Commissioner Edward Scheidt highway patrol cars in the future may be equipped with 35mm cameras.

Through an arrangement with Markel Service, Inc., a nationwide safety organization which is an affiliate of the nation's largest bus and truck insurer, two of the cameras will be loaned to the Highway Patrol for the next 90 days on an experimental basis.

Should the experiment prove successful the photographic equipment will be leased from Markel at \$60 per month per unit. Scheidt described the move as another measure to modernize and make more effective the use of up to the minute techniques in keeping the state's accident toll as low as possible.

The camera, which takes either still or motion pictures, is operated by a button on the steering wheel. It is bolted to the roof of the car and shoots through the windshield. Within the camera is a police checked speedometer and a clock which is superimposed on each photograph. Film, on 100 foot rolls, is exposed at the rate of 16 frames per second. The scope of the camera is sufficiently wide to

pick up road signs and general traffic conditions.

Scheidt predicted use of the cameras would have an "intense psychological" effect on violators as well as providing actual photographic evidence.

Two of the cameras are being installed in patrol cars this week.

Wards Club Party Proves Successful

Members of Ward's Home Demonstration Club are well pleased with the results of the box supper, auction sale and tacky party, held last Friday night, in the community building. The boxes sold well, the highest one bringing \$21.00. A number of pies, cakes, aprons and other articles were sold at auction. The bidding was strong and sales were satisfactory. The grand climax was reached in awarding a cake to the best-looking woman.

Several club women were nominated, but the final race was between Mrs. Lloyd Briggs and Mrs. Curtis Chappell. Total receipts from voting amounted to \$369.45.

The costumes were original and very comical, causing roars of applause and much laughter. Prizes awarded for the tackiest costumes were: For the lady, Mrs. Curtis Chappell; for the man, Nurney Chappell. String music was furnished by local talent. It was, indeed, an evening of fun, pleasure and profit.

Our thanks to Francis Hicks, the auctioneer; also to the ways and means committee who planned and promoted the whole affair, and to friends and neighbors for their generous support.

Total receipts were \$556.55.

Show us the man who never makes a mistake and we will show a man who never makes anything.

—H. L. Wayland.

At this time of the year the jobs that must be done in the garden are so many that it is hard to know what to emphasize.

In the vegetable garden the time is getting short for planting the cool season crops. Unless these crops get well started before hot weather sets in the quality will be poor. The last frost date is also just around the corner and we should be ready to set out tender plants as soon as it is safe.

If you wish to get a head start on the season, hot caps may be used to protect the plants for about two or three weeks before it is safe to plant in the open. Starter solutions have given good results in getting the plant off to an early start. A good starter solution may be made by dissolving one pound of a complete fertilizer such as an 8-8-8 or 6-6-6 in five gallons of water. Water each newly set plant with one half pint of this solution. The results are worth the extra effort.

If you haven't already done so, top dress your lawn with poultry manure

or about 20 pounds of a good garden fertilizer per 1,000 square feet of area. Follow this with light applications of nitrogen during the summer. Large trees on the lawn must be given additional fertilizer or they will use that provided for the grass.

Shrubs and trees should be fertilized at this time also because most of the new growth is made from now till mid-summer. Spring flowering shrubs may be pruned as soon as they are through blooming. Only necessary pruning or thinning out is advisable. If ligustrums or other rank growing evergreens are to be pruned severely now is a good time to do it because the new growth will come out immediately.

In the fruit garden, mulch strawberries with pine straw or short wheat straw. It will keep the berries off the ground and also prevent sand from splashing onto the berries in rainy weather.

Dewberries, boysenberries, and raspberries should be thinned to six or eight good canes per hill and tied up to stakes or wires.

Question: What makes some of my chickens lame?

Answer: There are several possible reasons for lameness. In some cases it is possible that a collapse of certain nerve centers has occurred, probably related to breeding. Such lameness is not contagious. In very young chickens rickets (improper bone formation) will cause a limp. This condition is dietary and can be quickly corrected. Another cause of lameness is perosis (slipped tendons). Perosis usually appears in birds six weeks of age or older. It is probably caused by a lack of mineral bal-

ance in the diet. Then there is leu-

kosis, which is caused by a tiny germ that is transmissible from bird to bird. Affected birds should be destroyed.

Question: How can I cut my dairy production costs?

Answer: There are many ways, but your best bet right now is to cut down on the protein in the grain feed ration. Now that pastures are growing the protein content in the feed should be cut to 10 per cent. To keep cows from getting thin on pasture a ration of 600 pounds of oats and 400 pounds of corn and cob meal plus steamed

bone meal and salt should be fed.

Question: How does tobacco blue mold spread?

Answer: The fungus parasite that causes blue mold produces two types of spores or seed-like bodies. One type has a protective coating that allows it to live over in the soil of the seedbeds where the disease has occurred. It can start the disease the following year if the old bed is used. The other type spore or seed-like body is produced by the moldy growth visible on the underside of diseased leaves. Single spores cannot be seen with the naked eye, but when massed together

in countless thousands they can be seen as the moldy, bluish mass known as blue mold. When ripe or mature these spores drift like smoke in air currents to healthy plants nearby or even miles away.

Outlived Them

"Yes," said the old man. "I'll be ninety-six tomorrow, and I haven't an enemy in the world."

"A beautiful thought," answered the new vicar.

"Yes, sir," went on the old man. "I've outlived them all."
