

## AROUND THE FARMS IN CHOWAN COUNTY

By C. W. OVERMAN, Chowan County Agent

**N. C. Peanut Insect Control Program — 1962:** The peanut plant is attacked by a number of insect pests, which feed on the foliage, the pegs, pods and kernels. In general, in North Carolina, thrips, leafhoppers and Southern corn rootworms are the most serious of these pests. The development of resistance by the Southern corn rootworm to aldrin in a portion of our peanut belt has necessitated changes in recommendations for insect control in 1962. R. L. Robertson, Extension Entomologist, makes the following recommendations for peanut insect control in 1962.

Thrips and leafhoppers may be controlled and southern corn rootworm damage reduced by a single application of phorate (Thimet) applied at the time of planting. A row applicator should be used to apply 10% phorate granules in the seed furrow at the rate of 10 lbs per acre. Phorate is highly toxic and the caution label on the container should be followed.

To control the rootworm (phorate only reduces damage) apply diazinon just prior to pegging. Apply 10% granular diazinon at the rate of 20 lbs. per acre in a 16 to 20 inch band over the row and work it immediately into the top few inches of soil. Phorate (Thimet) at planting and diazinon just prior to pegging will control thrips, leafhoppers and rootworms.

If phorate is not used at planting, make two applications of DDT, Sevin, or malathion for thrips control. Make the first application as soon as damage appears. Follow with a second application two weeks later. Aldrin applied at the first cultivation will also control thrips. Apply 40 lbs. of 5% granular per acre and work immediately into soil.

If phorate is not used at planting, leafhoppers may be controlled with three applications of DDT, Sevin, or methoxychlor. Apply at the rate of 1 lb. active ingredient per acre at 2 to 3 week intervals beginning about July 10.

Vines may be fed to dairy or slaughter animals if phorate, diazinon, Sevin, Malathion or methoxychlor are used according to recommendations.

**Farm Management Reminders:** Take soil samples and have tested for next two years crops. Follow soil test report recommendations, if there is any question or you don't understand

the report then consult your county agent or some other agricultural worker.

Now is the time to plan for high yields of high quality crops. You can't compete with nematodes, diseases and insects. To control nematodes, pre-plant soil fumigation is most effective and least expensive. Effective soil fumigation consists of using the right fumigant, properly applied at the right time, for the crop to be grown. Ask for information.

Disease and insects are often coupled together in that some plant diseases are spread and enhanced by detrimental insects. The control is one of prevention rather than cure. Plan to follow a dusting or spraying schedule to prevent insect and disease damage. After damage occurs it is too late for best results.

**Farm Practice Sheets:** Sheets listing recommended production practices on various crops and livestock are being prepared. Sheets are completed on Sweet Potatoes, Peanuts and Cotton. As you get these through the mail or from our office, read each one carefully then file for future reference.

Most of the practices are needed on every farm but the need will vary. Use the ones needed on your farm. By keeping the practice sheets on file for reference they may be used as a check to determine any trouble which occurs and why.

Remember, Farming Is A Business, Not Just A Way Of Life! If you were going on a long trip you would use a road map to plot your course, you wouldn't depend on just going in a certain direction. Make good production practices your road map to successful production in 1962.

### Farmers Asked To Release Cotton

Continued from Page 1, Section 1

fect their future farm allotments: The farmer must (1) plant at least 75 per cent of the 1962 allotment, or (2) release the acreage he does not need and plant at least 75 percent of the remainder, and (3) actually plant some cotton in 1962 if the entire allotment was released in both 1960 and 1961. Farmers who do not intend to plant all of their cotton allotment in 1962 are urged to get in touch with the ASCS County Office and discuss how to protect their future cotton acreage history.

In order to create more interest in saving cotton allotments, a page advertisement appears in this week's Herald which is sponsored by nine Chowan County concerns, Hobbs Implement Company, B. Warner Evans Gin, Edenton Feed & Livestock Company, M. D. Baker Hog Market, Leary Bros. Storage Company, Speight Ginning Company (Home Feed & Fertilizer Company and Chowan Storage Company), J. D. Ward & Son Gin, Edenton Tractor & Implement Company and Chowan County Farm Bureau.

Here's another big A&P Freezer Sale timed just right for stocking your freezer for the months ahead. Your choice of beef cut to your specifications, wrapped in market paper at no extra cost, and the contents marked on each package. If you desire, your meat will be wrapped in freezer paper at an additional cost sufficient only to cover the cost of freezer paper. Don't miss this big sale. Come in today and place your order. You may pick it up later.

**It happened 100 YEARS ago**  
The oldest incorporated trade association in the country, the United States Brewers Association, was organized in 1862... the same year that

IN NORTH CAROLINA the much-feared Union Ironclad Monitor, limping southward after its sea-duel with the Confederate Merrimack, sank off Cape Hatteras. As news spread throughout the South, steins of foaming beer toasted the sinking of this worthy foe.

For then, as now, beer was the traditional beverage of moderation — light, sparkling refreshment that adds a touch of Southern hospitality to any occasion. North Carolinians have always enjoyed the good fellowship that goes with every glass.

TODAY, in its centennial year, the United States Brewers Association still works constantly to assure maintenance of high standards of quality and propriety wherever beer and ale are served.
