

### Show S. S. Card To Your Employer

This summer a great number of young people will be working and paying social security contributions for the first time. Student employment in summer jobs will begin within the next few weeks. To be sure you get social security credit for the work you do, show your employer your social security card the day you apply for work. The importance is even greater now for young people because of recent changes in the disability provisions for persons under 31 years of age.

If you have lost your card, or never had a card, be sure to get in touch with the social security office now, so you will be prepared when the time comes for you to apply for summer work. All employees must have a social security number in order for their employers to report the wages that have been paid. If you need a social security number, contact your social security office at 401 South Dyer Street, Elizabeth City, North Carolina.

### Around The Farms In Chowan County

By R. M. THOMPSON  
County Extension Chairman

If you used either of the systems to control thrips in your peanuts, you have probably noticed yellow spots on

the edges of the leaves in your peanut patch. Dry weather makes this show up more severely than if we had had average moisture for the month of June. Even where these spots are showing there are beginning to be signs of thrip damage in the peanuts. In some cases the damage has already begun to hurt by the time it is real noticeable as the leaves are scarred and the plant stops growing. When it is severe enough, it is the same as waiting for planting or growth occurring. When the young plants are attacked by a large number of thrips, new growth is damaged causing stunting and consequently yields are reduced. For this reason, it is time that we consider starting the dusting program to control thrips. Seven is the insecticide that is cleared and can be either applied as a spray or a dust. If you are not ready to begin your regular dusting program for leaf spot, Sevin by itself

It is also very noticeable and this brings on the time that we consider using land plaster. For those that consider two applications of land plaster beneficial, we suggest 400 pounds for each application. For those that do a good job of covering the whole entire row with land plaster 800 to 1,000 pounds is considered adequate. With the runner type peanuts, at least 20" across the top should be covered with land plaster while with the bunch type a 16" band properly applied seems to be adequate. We feel that on light sandy land proper application of land plaster is a must to receive maximum benefits. If you are considering other methods of applying calcium this year, and there seems to be quite a bit of interest in it, our suggestion is to follow the program recommended on the label and compare the results with the methods you have been using in the past. Regardless of which source you use, be sure and apply material in the method that the label suggests so that you can receive maximum benefits.

**DO's AND DONT's**

In order to help prevent the spread of hog cholera, here are a few suggestions:

**DO**—Have a special pair of boots or shoes to wear when feeding or working around your hogs. Change shoes when you finish. This will help to prevent you "bringing it home."

**DO**—Be informed of all rules and follow them.

**DO**—Report sick hogs to your veterinarian at once. Suspect cholera first and hope it isn't. The sooner cholera is diagnosed, the better the chance of preventing its spread.

**DO**—Cooperate with veterinarians if you are in a quarantine area. Answer all questions as fully as you can. Help them to help you.

**DON'T**—Visit other hog operations or allow visitors to your hog operation.

**DON'T**—Get curious. If you hear of hog cholera, don't go see what it looks like. You may learn from painful experience.

**DON'T**—Feed any garbage or table scraps.

**DON'T**—Move any hogs without a permit except hogs going to slaughter that are not in the quarantine area.

**Health Tip OF THE WEEK**

from **Hollowell's**  
**Rexall Drug Store**

Babies will get less air in their tummies, and suffer less discomfort, if they are kept vertical when being nursed or bottle fed. Adults confined to bed after surgery will also have less digestion trouble if they eat in a partially erect position, rather than lying down.
