

IRONING'S OUT ...PRESSING'S IN

Every season fashions seem to change, and many new trends are not really innovations but echoes of the past. Take spring and summer '70's fashions, for instance, that hark back to the 30's.

The new line is a softer, body-clinging line. It may even seem somewhat familiar if you're a devotee of movies of the 30's on TV.

The fabrics of these fashions are different, too. They're still the wonderful man-made fabrics with all their ease of up-keep, but they're jersey, crepe, clinging voile and chiffon. So even how we take care of our fashion changes.

Ironing is out... pressing is in. In, too, is a good iron with a wide range of fabric controls, and a pressing and ironing aid like Magic sizing. Magic sizing restores the like-new look and feel to all washables, without adding scratchy stiffness.

What is the difference between ironing and pressing? Pressing is a more delicate process than ironing. It requires a gentle hand and an up-and-down motion. In pressing you raise and lower the iron as you move across the fabric to keep the grain in its original position. Pushing the iron, as you do in ironing, may stretch and distort the fabric.

And in the new body-clinging fashions where both line and fit depend on bias seaming, this can ruin a garment.

Sizing offers many advantages when you press. Magic sizing is the special ironing and pressing aid that was created especially to help care for man-made fabrics and unlike starch leaves no messy build up on your iron or clothes to cause scorching or yellowing.

And you can use Magic sizing without a press cloth. This is a big help when you're pressing a garment with intricate seaming. You can gently nose the point of your iron right to the seam, whether it's a straight, curved or corner seam, and see what you're doing every minute. The pressing-plus-sizing helps retain the original lines of a dress, and at the same time adds a like-new body and finish.

When you start adding the longer, clinging lines to your wardrobe, remember, nothing but the lines say "the thirties"... the fabrics are all modern, man-made and marvelous to wear, and to take care of, and with Magic sizing to help, the pressing is done quickly and easily.

PROJECT SPECIALIST — Todd Atkinson, marine technology student at Cape Fear Technical Institute, is playing a major role in the Tektite II project going on in the Virgin Islands. (Photo by Perk Bingham).

Student Ready To Live On Sea Floor In Project

By NANCY DUCKETT

When a North Carolina marine technology student lives on the bottom of the sea for 30 days later this summer, he will be a vital part of an exciting seven-month venture called Tektite II that is taking place in the Virgin Islands.

Todd Atkinson of Newton and Cary, a marine technology student at Cape Fear Technical Institute, will be on a team of four scientists and one engineer who will live in a habitat on the ocean's floor where underwater research is taking place. His job will be habitat engineer and backup diver for the four scientists.

Also participating in the overall Tektite II project are about 100 of Atkinson's classmates, several instructors, two of the institute's training vessels and the ships' crews. The two vessels are the only ones participating in the project, which began in April and will run through October.

This learning experience was made possible for the Cape Fear Tech students through a \$126,400 sea grant from the National Science Foundation to go towards the operation of the institute's oceanographic research vessel, Advance II.

Also, the institute has a \$70,000 contract with NSF to operate the vessel Undaunted in its involvement in Tektite II, according to M. J. McLeod, technical institute president.

The project is a cooperative effort among government agencies, private industry and educational institutions under the leadership of the Department of Interior. Also participating are the National Aeronautics and Space Administration, National Science Foundation, government of the Virgin Islands, Department of Navy, Smithsonian Institution, U. S. Coast Guard, the Department of Health, Education and Welfare and the General Electric Company.

The project not only involves underwater research, but it is concerned with an oceanographic survey of the Virgin Islands. During the project, teams of top-flight scientists and engineers from over the nation are exploring inner space as some live up to a month at a time in one of two habitats on the ocean's floor. Ten of these missions are at 50 feet and seven at 100 feet.

The larger habitat has four chambers while the "miniat" has two. The vessel Undaunted is serving as the smaller habitat's support ship, and it is also being used for a laboratory.

According to Tektite II's director of public affairs, as the scientists conduct their undersea research, they are being observed via closed-circuit communications by behavioral and biomedical teams on the surface. The observations will contribute to man's knowledge of the psychological and physiological factors associated with missions performed in an isolated environment common to manned undersea and space missions.

While the aquanauts are at work in their pressurized home, oceanographic research and training are being conducted on the Advance II. Trainees are working aboard ship in support of actual research and engineering programs conducted by senior scientists and engineers from cooperating organizations.

The versatility in Tektite II allows the students to keep up with their classwork at the Wilmington based technical institute while they are "doing their thing where the action is." This is done by rotation. Every two weeks a group of students is flown to the project site in a Delaware National Guard aircraft, and another group is immediately returned to Wilmington. The instructors also are taking their turns participating in the project.

THIS IS THE LAW

By ROBERT E. LEE
For the N. C. Bar Association
LAW DAY

May 1 has by presidential proclamation become Law Day U. S. A.

It is a day for reaffirming our faith in the traditional American respect for law and order.

In recent years, as is well known, there has been an increase in crime and a rising disrespect for law enforcement personnel.

Half the people for reasons of safety stay off the streets at night and more than a third of the people keep firearms or dogs for protection.

A disrespect or disregard for law is always the first sign of a disintegrating society. Is law to be replaced by force in America during our time? A number of persons, most of whom are young, intelligent or idealistic, have been caught up in a wave of indignation about problems in modern society. This has led to tragic consequences for the observance of law and order. A strong moral conviction aim is to destroy, not to

breaking the law. Suppose every group or individual who honestly believed he had a valid and righteous cause did the same thing? Chaos would result.

The rights and freedoms of one person must end where the rights and freedoms of another person begin.

Unfortunately there are a few on our university campuses and in our church pulpits who have attempted to sanctify and give respectability to ideological crusades in opposition to democratic values and the principles of free government.

There is an air of self-righteousness about many of these moral movements that seem to have a passion to destroy—our government, our democratic values our way of life. They criticize, belittle, and mock our contemporary society, which is contemptuously called the "Establishment."

Though disliking our society, many of these moral movements offer nothing constructive in return. Their destructive in return. Their a strong moral conviction aim is to destroy, not to

Report From Washington By Rep. Walter B. Jones

The House spent the major part of the week ending July 17 debating the Legislative Reorganization Act without completing final action. The bill will reorganize the legislative procedures in the House of Representatives. I will report on the details in a later column after the bill has received final action.

Among other action this week was the important matter of adopting conference reports between the House and Senate versions of previously approved legislation. Among these reports was one providing appropriations for fiscal 1971 for secondary and higher education. The total amount of the conferees report was \$4.4 billion. Of particular interest to most of the First District was the approval of funds for impacted areas, which are as follows:

One hundred per cent of entitlement for category "a" children in hardship school districts where they represent more than 25 per cent of total enrollment; 90 per cent entitlement for all other "a" children; 65 per cent of entitlement for "b" children.

In connection with the education bill, for the last three or four years, I have reported the House approval of the Whitten Amendment, but each time the Senate refused to agree with the language. But the approval of the conference report by both the House and Senate contains the following language:

"No part of the funds contained in this act may be used to force any school or school district which is segregated as that term is defined in Title IV of the Civil Rights Act of 1964, to take any action to force the busing of students; to force on account of race, creed or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent."

No part of the funds contained in this act shall be used to force any school or school district which is segregated as that term is defined in Title IV of the Civil Rights Act of 1964, to take any action to force the busing of students to require the abolishment of any school so desegregated; or to force on account of race, creed or color, the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining federal funds otherwise available to any state, school district or school."

This, of course, will not become law until signed by the President. I am sure the majority of members of Congress hope that this will be a mandate to HEW and the federal courts to stop using educational funds to solve social problems and get on with the

Two To Attend Forestry Camp

Over 100 North Carolina high school boys enrolled in vocational agriculture have been chosen for week-long forestry camp awards by the Southern Forest Institute and the State Forestry Service.

The award is an expense paid week at Mitchell 4-H Camp near Swansboro in Onslow County, July 26-August 1. C. L. Keels, FFA State Advisor for the N. C. Department of Public Instruction, is planning coordinator for the camp.

Chosen to attend from Chowan County are Jeff Copeland and Jimmy Evans.

Keels said that activities for the week will combine education in the area of forestry with organized recreation. Instruction will be provided by professional foresters and will include many types of outside activities, he said.

All those chosen for the award are members of the Future Farmers of America with an interest in forestry.

Presidential Vote

Mr. Keeler said that in 1972 over 12 million people will vote, for president for the first time. By 1980, 40 per cent of the electorate will be under 35. These figures will drop even lower if 18-year-olds are permitted to vote.

Comparing today's political climate to that of the late 1800's when farmers, young people, laborers and others who wanted more voice in government banded together in the Populist movement, he asserted that today's "New Politics" is a politics of involvement by more people, more deeply concerned about issues and more committed to their solutions.

"Business has two options in this day of the New Politics," he said. "We can stand on the sidelines... or we can become an integral part of the most exciting and fruitful period in our history so far as the relationship between the people and their government is concerned."

A Thought to Remember

By MARVIN BARHAM

We were reading about the Seven Wonders of the World. Of all these great and wonderful things—only the remains of one, the pyramids of Egypt, are standing.

After a description of each, these words appear. Destroyed in wars, or no trace remains.

I wonder how wonderful they were to have gone the way of time—and no longer exist on the face of the earth.

There are many wonders of the world that exist day after day. Those wonders are love, dedication, concern, loyalty and a hundred other acts that are performed by men. Instead of diminishing—these grow and make life wonderful for others.

OUR THOUGHT TO REMEMBER: Give lasting qualities to others—these only remain.

Colonial Funeral Home

Edenton, North Carolina

NOW... GET BOTH
New Zenith Color Commander Control and AFC—Automatic Fine-tuning Control

1970 **ZENITH** handcrafted **COLOR TV**
fine-furniture styled
23" giant-screen
DIAG. 29 1/2" sq. in. rectangular picture
compact console

The ABBEY - Model A4514M
Charming Early American styled compact console in genuine Maple veneers and select hardwood solids, exclusive of decorative front and trim. 5" x 3" Twin-Cone Speaker.

EXCLUSIVE NEW ZENITH COLOR COMMANDER CONTROL—Now one knob adjusts contrast and color level with brightness in proper balance simultaneously—and they stay perfectly in balance as you adjust the color picture to match changing light levels in the room. There's no longer any need to turn separate controls!

ZENITH AFC—Automatic Fine-tuning Control... electronically fine tunes color TV—even perfects your fine-tuning on UHF automatically.

TITAN CHASSIS combines famous Zenith hand-crafted dependability with solid-state performance.

CHROMATIC BRAIN integrated circuit demodulator for the sharpest, clearest, truest hues in color TV.

GYRO-DRIVE Advanced Zenith UHF Channel Selector for smooth, easy, precise selection of UHF channels.
