Earth Energy Center

Frank Watkins - Owner

Many of the people who come into this area seem to think of solar energy as being some vague, space age technology priced far above the average person's ability to pay. This is an unfortunate misconception.

Solar energy has been with us as long as the sun has been shining. Over the years, extensive developments have taken place in the advancement and actual application of solar technology.

Today, solar system technology is a highly refined, extremely cost-effective investment. Even in light of significant technological advances, the solar energy process as it relates to residential usage is very basic.

One example of ways to save on your energy bills is the solar system for hot water heating. Heating water costs the average household 30 per cent of its energy bill. A solar system costs just pennies a month to run the circulating pump, therefore it would cut your energy bill significantly.

If you're serious about saving dollars on energy, the time to act is now. As energy costs go up and up, the demand for energy saving systems will go up and when the demand increases, most always the prices for the systems will increase also.

So when you decide you're serious about saving energy and cutting energy cost, we suggest you give Earth Energy Center a call at 335-0997, or stop by at 1545-A North Road in Elizabeth City. You'll be glad you did!

Little Mint Of Windsor

Dotsie Nurmi - Manager
