HOT AND IN A HURRY!

Hot as a firecracker. That's an expression. Hot as a soldering iron. That's a fact! A fact spelling progress as new telephone connections are soldered together—putting speed into the Telephone Company's program to improve service.

Telephone folks are in the thick of things, striving to give you as quickly as humanly possible the kind of service you want. Installing equipment for more and better telephone service is a time-consuming, complicated job. Miles of wiring must be laced into switchboards. Millions of intricate connections soldered, each in its precise place. Banks of electrical relays set up. Cables laid. Poles erected. Wires strung. And sometimes a whole new building constructed.

"Get the work out!"

That's our slogan. And that's exactly what we are doing as fast as we can get the materials and then install the equipment.

PROGRESS . . . and How!
In NORTH CAROLINA during 1946, the Telephone Company installed more facilities than at any other time in history. 52,000 miles of exchange wire, 4,200 miles of long distance circuits, and 37,500 telephones were added. 42 local and long distance central office additions were made and the number of employees increased 35 per cent.

As telephone service grows, so does its value to you. That's because you can reach so many more people. Each new day brings you more for your telephone dollar. A bargain . . . and how!
