## Fair Association Is Sponsoring Corn Contest

The corn production contest is being sponsored by the County Fair association this year. A prize of fifty dollars will be awarded to the farmer in Cherokee county who produces the greatest yield of corn on any measured acre.

To be eligible for this prize the contestant must turn in his name to the secretary of the fair association at least two weeks before the fair or before the corn is harvested. Also, the contestant must enter an exhibit in the ten and fifty-five ear classes in the fair.

To produce high corn yields the Experiment Station recommendations will prove helpful. The prize acre should be started by planting early (about May 1) with the best seed available. The yellow hybrid U. S. 282 and the white hybrid, Tennessee 10, will give the greatest yield if locally grown seed are used. If locally grown hybrid seed are not available, plant Holcomb's Prolific white corn or Jarvis Golden Prolific yellow corn. Seed should be spaced 16 inches in four-foot rows or 18 inches in 3 1/2 foot rows.

At least 500 pounds of a 6-8-6 or a 5-10-5 fertilizer should be used, and will give best results if put in the row. A side dress of at least 200 pounds of nitrate of soda or 100 pounds of ammonium nitrate should be used if available. If these nitrates are not available, it will usually pay to side dress with a fertilizer with a high nitrogen content.

Corn should be cultivated often. Keep weeds down, and no more. The cultivation should be as shallow as possible. As the corn gets older, the cultivation should be further from the plant, so that no roots will be broken.
