

Principal To Be In Office For Next Two Weeks

ANDREWS—Boyd B. Robinson, principal of Andrews elementary school, states that he will be on duty at the elementary school office for two weeks after the close of school. These two weeks will be used in making statistical reports for the superintendent and state's offices, making inventories of instructional supplies and equipment, listing needed repairs and renovations, studying the reports and inventories made by the teachers, studying records of the children attending the Pre-school Clinic for classification at the beginning of next school year; recording and filling pupils' register sheets in individual envelopes, conferring with the superintendent on school policies.

Teachers, parents and pupils who wish to confer with the principal will find him in his office from 9:00 to 12:00 in the morning and from 1:00 to 4:00 in the afternoon.

Know Your Principal

(By Mrs. Albert G. Brown)

ANDREWS—Boyd B. Robinson has recently been re-elected principal of the Andrews elementary school for the 1948-49 school term. Mr. Robinson has served as principal of the elementary school for the past five years, coming to Andrews in 1943. Mr. Robinson holds his A. B. degree from Lenoir Rhyne college, Hickory, and his M. A. degree from Duke University, Durham. He also holds his Principal's Certificate based on a Master's degree.

At Lenoir Rhyne college Mr. Robinson did his Major in the Field of Mathematics and his Minor in Science. While attending Lenoir Rhyne college Mr. Robinson won the award offered by the Head of the Mathematics Department for preparing the "Neatest and Completest Notebook on the Teaching of Algebra and Geometry in the Public Schools."

In the Duke University Graduate School Mr. Robinson's work was in Administration and Supervision of Elementary and Secondary Schools. Mr. Robinson's Thesis, "Inequality of Educational Opportunity in Caldwell County," was based on a comprehensive study of the schools of Caldwell county. Mr. Robinson spent an entire summer visiting, photographing, grading, and scoring each of the 43 school buildings, both inside and out, in Caldwell county on 83 different items. All this data was compiled in his Thesis along with recommendations and suggestions for the improvement of the Caldwell county schools. This complete study has given principal Robinson much information that the average school administrator does not have.

Mr. Robinson has had approximately twenty-two years' experience in the teaching profession. Six of these have been as classroom teacher and sixteen have been in the administration and supervision of elementary and secondary schools.

Since assuming the principalship of the Andrews elementary

school five years ago, the number of teachers has increased from 19 to 27. There are four other elementary schools in the state having twenty-seven teachers and there are only ten elementary schools in the state with a larger number of teachers.

The outstanding project of the five years of service to the Andrews elementary school has been the work toward standardization. With the cooperation of the various community clubs and the community in general, Mr. Robinson and his teachers are putting forth an extraordinary effort to replace the Andrews elementary school on the list of accredited schools for this state. The elementary school was dropped from the accredited list in 1940 and it is hoped that it can be put back on the list for the 1948-49 school year. Over a thousand dollars have been spent this year for library books alone for the elementary school and five hundred

dollars are in the process of being spent for maps, globes, supplementary readers, dictionaries, and other necessary items.

Mr. Robinson is very active in the community. He is pianist for the Sunday School Department and the evening service in one of the local churches, and he is also assistant pianist for the morning preaching hour. Mr. Robinson is a teacher in the young peoples' division of the Sunday School. He is vice-president of the Board of Stewards. Mr. Robinson is a member of the Andrews Rotary Club and is a past secretary of two years' service in this organization.

Miss Elizabeth Troxler returned to her home in Haley, Tenn., last Tuesday. She was accompanied to Chattanooga, Tenn., by Mrs. Paul Jordan, Mrs. D. E. Pullum, Miss Gladys and Jean Christy.

Mrs. Sarah Mae Ledford and small daughter are visiting in Orlando, Fla.

The Importance of "Stepping Down"

Here is the story of a new principle of design that has rocked the industry and given Hudson unique beauty not possible in any other type of car.

THE recessed floor in the new Hudson—now widely known as the "step-down" feature—is the talk of the automobile world. And rightly so! This interesting development is the key to a new kind of motor-car beauty never before obtainable.

People everywhere are attracted by Hudson's low, streamlined silhouette and free-flowing lines.

Only Hudson, because of its exclusive recessed floor that you step down onto, is able to offer streamlined, low-built beauty without asking you to give up interior head room.

Let's take a frank look at the motor-car designer's problem. Since streamlining an automobile reduces available head room for rear-seat passengers, to achieve a low silhouette and maintain adequate head room, both floor and seats must be lowered to compensate for the lowered roof. The recessed floor is a necessity.

But it is difficult to lower floors and seats, because in all cars, except Hudson, they are built on top of a frame. Only

Hudson has a new, all steel Monobilt body-and-frame, part of which is a rugged base structure that permits lowering floors and seats down within the frame. The sketches below illustrate this design problem and show how Hudson's recessed floor provides a low, streamlined silhouette, yet preserves head room.

OTHER CARS
The car above cannot be streamlined because the need for head room above the rear seat (which is built on top of a frame) makes it impossible to lower the roof.

OTHER CARS
Of course, it is possible to adopt free-flowing lines without recessing the floor, as sketched in the car above, but over-all height must be raised, and this destroys the possibility of a low silhouette, which is the mark of the modern motor car.

NEW HUDSON

Here is the long, low, gracefully streamlined Hudson—only five feet from ground to top. You can see how the streamlined roof comes down sharply over the rear-seat portion of the car, as compared to the other type of roof lines shown in sketches to the left. But Hudson floors are recessed down within the frame, seats are lowered, so you get more than ample head room.

The "step-down" principle requires years of engineering work, the development of new production techniques and equipment, and millions of dollars of highly specialized new plant investment. Perhaps this explains why Hudson alone offers this vital new design principle today.

You'll probably expect the motor car that is the talk of the nation to offer you even more than beauty and comfort. And it does! Your nearby Hudson dealer will show you The Importance of "Stepping Down"—also its results in riding and driving ease, performance and safety. Hudson Motor Car Company, Detroit 14.
