Although the United States has traditionally been a net exporter of lumber, the situation has been reversed since 1941, with the imports since that year averaging about twice the exports.

Student Drivers Found To Be Efficient, Safe

Student school bus drivers, when compared with adult drivers are both efficient and safe, a State Education Commission group has found.

The report prepared by the pupil transportation committee of which J. J. Tarlton of Rutherford is chairman, includes a table comparing student bus drivers with adult drivers. The table shows that over a five-year period, an average of more than 83 per cent of school bus drivers have been high school boys and girls, and that they have been responsible for only about 75 per cent of school bus accidents.

The report states "Although school boys and girls have been driving most of the school buses in North Carolina for more than fifteen years, a good part of the public is not yet convinced that they are as good drivers as adults."

"In the opinion poll conducted in connection with the education survey, approximately one-half of the citizens who answered this question stated that they thought adults were better bus drivers than high school boys and girls. How-ever, there was no such division of opinion among the superintendents who supervise the transportation program in North Carolina."

More than two-thirds of the superintendents who replied to the questionnaire stated that high school boys and girls are more satisfactory bus drivers than the adults who are available.

The report says that the use of student drivers has been a "very great factor" in achieving the State's record for economy in pupil transportation. It continues "these students have an excellent record in safe driving and a quite satisfactory record otherwise. The standards for school bus drivers seem to be adequate, except for the lack of a requirement that they pass a physical examination."

The report shows that the State transports daily to and from school approximately 347,000 pupils, at a cost of \$14 per pupil.

This is the lowest per pupil cost for all of the 48 states. One reason is that North Carolina pays its student drivers only \$20 per month, with occasional local supplements.

About 1550 of the more than 5,000 buses in operation are from eight to ten years old. But the committee reports that the fleet as a whole, is in excellent condition. Some of the buses, however, are overcrowded and an estimated 10 per cent of the State's transported pupils must leave home an hour and a half or more before school opens.

New Substance To Prevent Dampness

New help against summer dampness in households and the damage that goes with it—mold, mildew, mustiness, rust, moisture stains, swollen wood, and loosened glue in furniture—is on the market this year in the form of non-drip moisture-absorbers or desiccants, according to Miss Ruth Current, home demonstration agent for the

State College Extension Service. Quoting home economists of the U. S. Department of Agriculture, Miss Current said silica gels and other substances, developed during the war to keep the contents of packing cases dry, are now for sale in retail stores.

The advantages of the new products over calcium chloride, which has been used for many years against dampness, are that they do not become liquid and drip as they take in moisture, and they can be dried out and used again, Miss Current said. When they have taken up all the moisture they can absorb, they change color, as an indication that they need to be dried out or replenished.

Pound for pound, they probably do not take up quite as much moisture as calcium chloride does, but they are far more convenient and easy to use. They do not need to be placed over containers that will hold liquid and not corrode, as calcium chloride does. Instead they may be used anywhere, in or out of a container. They may be strewn on closet floors or shelves or enclosed in trunks, bureau drawers, or clothes bags.

The label on the package gives directions as to the quantity and method of use.

Wool consumption during the war was stimulated greatly by military demands, and continued high in 1946 and 1947.
