A touch and you GO—that's DYNAFLOW!

YES, it boils down to just about that. You start your engine, set a lever — and from then on your treadle foot takes over. You press the accelerator — and move softly and smoothly away. You speed up, slow down, halt completely — and your right foot alone, operating gas treadle and brake, does it all. How come? Simply because Dynaflo Drive is the one passenger car drive in America that

gets completely away from gears which function in fixed stages. Changes in the way oil flows, instead of changes in gears, adjust your engine power to your driving requirements. Whether you are starting out, climbing a hill, surging past others or cruising easily, there's nothing for you to do except feed gas. For very fast starts, extreme pulls, reserve braking power, you flick the selector lever—and your engine seems suddenly to double in size. For parking, there is a very special setting, exclusive to Dynaflo Drive, that rigidly locks rear wheels.

Even rough and chattery roads are made smoother by power that flows along through a cushion of oil — your whole car is "sweeter" in its feel, far silkier in its actions. Quite rightfully is Dynaflo Drive called the most important development since the self-starter. It's a basically different way of transmitting power — and one you should know about firsthand. See what your Buick dealer can do about arranging that for you. The merest sample of Dynaflo magic will make you want to place an order pronto, whether or not you have a car to trade!

Here's your Buick Dealer's Four-Square Selling Policy
