

Do Not Use Oil On Wax

By RUTH CURRENT

State Home Demonstration Agent
Oiled dustcloths and oiled mops pick up dust well but should never be used on wax surfaces, caution home management specialists. An oiled cloth used on furniture finished with wax makes the wax sticky and dingy because the oil softens it, just as an oiled mop does on a waxed floor.

For dusting waxed furniture the specialists recommend either a clean, soft, lintless cloth or dusting mit, or the round brush attachment of a vacuum cleaner. After dusting, rub the furniture with the grain of the wood to keep the surface shining.

Furniture may need re-waxing once or twice a year, depending on how much use it gets. If paste wax is used, place a small dab of wax between several layers of cheesecloth and rub with a circular motion. Let dry a few minutes and then polish briskly following

SOMETHING NEW—The triangular-shaped cap and sleeve insignia, designed from driver's license examiners of the State, is displayed by Frank M. Blackley of Raleigh and Fayetteville. Blackley, who has been with the examiner unit for three years, recently was promoted to supervisor of examiners of the Central District, with headquarters in Fayetteville. The insignia were issued in order that the public many more readily recognize the examiners, who wear forester green uniforms with black ties. Men wear billed caps and women overseas-type caps.

the grain of the wood. If liquid wax is used, apply with a soft cloth, let dry a few minutes and then polish. Polish before the wax becomes hard. A soft thick wool cloth or mit is excellent for polishing.

Once a wax finish has become gummy from mistaken use of an oil cloth, it is usually necessary to remove the wax entirely and apply a new coat. Remove with a cloth wrung out of soapy water, followed by clear water. Let the wood dry thoroughly before applying wax.

There are several little things that make everyday cooking utensils more satisfactory to the women who use them. Look for these features when you buy kitchenware:

Handles firmly attached so they cannot loosen or turn.

Easy-to-see colored markings on glass measuring containers.

Deeper spouts on all utensils designed for pouring.

Mixing bowls with straighter sides.

Dish drainers with wires closer together to prevent silverware and small utensils from falling through.

Shorter and more comfortable handles for mixing spoons and wooden spoons.

Dusting peanuts for leaf spot control not only increases the yield of nuts, but also the yield of hay. To compensate for this increase, the number of stacks should be increased by about one-fourth in dusted fields.

Red Paint Is Useful

By RUTH CURRENT

State Home Demonstration Agent
Bright red paint can be put to many useful purposes around the house, as an aid to the safety and convenience of the family, home management specialists say. Because red is one of the most eye-catching colors, it is useful as a warning and a hurry call.

For example, the containers of such poisonous materials as lye preparations for cleaning drains or insecticides, which must be kept where children cannot possibly get at them, may well have a coat of red as a distinguishing mark.

Red also may help in emergencies. The pail of sand which many wise families keep on hand for fire control will be easier to locate if painted red, and the outdoor faucets to which a hose must be connected in a hurry.

Finally, red paint on the handles of small garden tools will help prevent losing or mislaying them, because it will show up clearly against ground, grass or foliage.

It is not easy to give a simple definition of tolerance and intolerance. We know what they are. In general, to be tolerant means that you are willing to admit that you may not know it all. To be intolerant means that you know you are right and everyone who does not agree with you is wrong. To be tolerant means that you are willing to live and let others live. To be intolerant means that you would like to force everybody to live and to think the way you live and think.

When you fry, braise, broil, roast, or stew meats, do you use every bit of the meat juice—serv-

Brasstown

Mr. and Mrs. Pat Coleman and children, Lowery and Bess, were business visitors of Mrs. Bessie Greene last Friday.

Verlin Brown and Mr. and Mrs. Beaver and family were business visitors in Brasstown Saturday.

Misses Annie Jo and Donnie Lou Garrett have returned home after visiting their sisters, Mrs. Edra Christopher and Mrs. Bobby Lee Everett, of Coosa.

Mrs. Mary Mauney and Mrs. Belle Martin of Ivy Log, Ga., are visiting Mrs. Mauney's daughter, Mrs. Joe Myers.

Pat Coleman is home again to deliver milk on his Mt. Valley route. He has been away on vacation, and Collin Greene has been delivering the milk.

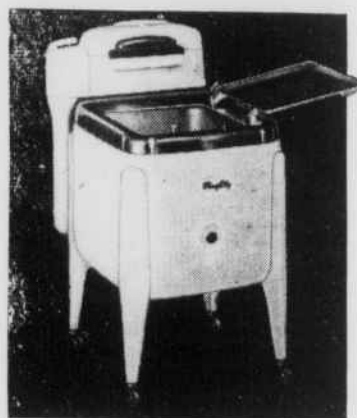

Mr. and Mrs. Jimmie Hughes and family have been visiting relatives in other sections of the country recently.

ed with the meat or in gravies, sauces, or soups? Not only is there good meat flavor in those drippings and juices, but there are vitamins too. Some vitamins in meat escape into the drippings, just as some vitamins and minerals go into vegetable cooking water. Save them both for good nutrition.

Cooking heat does not destroy the vitamins in meat, but instead draws them out into the liquids. Braising and stewing draw out more vitamins into the liquids than broiling or roasting. Frying keeps more vitamins in the meat than any of the other methods, but only if you fry your meat in shallow fat at low temperature.

Foods fried properly are digestible if you have a normal digestive tract—so say our medical authorities. When you continue to "feel full" long after a meal of fried food, it's only because fats take a little more time to digest than proteins or carbohydrates. Thus they're a stick-to-the-ribs food for active, working people.

Over 5½ Million Maytags Sold!

Three models, priced for any budget, \$124.95 to \$179.95. Easy terms—liberal trade-in. Let us show you the special advantages of a quality Maytag. Come in today for a demonstration.
