### Dairymen Need Winter Production

By: W. P. WALKER

Retail milk distributors, to meet the more or less uniform demands of their customers, must receive a uniform supply of milk from producers, as an incentive to encourage equal production of milk throughout the year distributors have placed producers on a base determined by the average monthly amount of milk delivered to the distributor during the six month period from Oct. 1 to Mar. 31. During the summer months a producer cannot expect to receive premium prices for milk produced in excess of the base he has made during the fall and winter months.

Knowing the importance of maintaining a high level of production during the winter months, plans and preparations made by our Cherokee and Clay D. H. I. A. members have enabled most of them to avoid a drastic production drop in Dec. In every herd tested evidences of efforts to maintain a high uniform production level could be seen. Good cows freshening in the fall are producing from 3 to 5 gallons of milk daily and their production has not fallen off like that of many cows bred to freshen in the next 4 to 5 months. Increased amounts of good hay and silage, better housing and bedding as well as an increase in the quality or quantity of grain are other practices which

LOOK AHEAD LOOK SOUTH

OUR ABIDING FAITH in the future of the Southland is expressed in our now-familiar invitation, "Look Ahead—Look South!" For the Southern Railway System is one of the South's most consistent and enthusiastic "salesmen."

Month after month...year in, year out...with advertisements in leading national magazines and newspapers we've "said it again"...urging industrialists, financiers and businessmen all over America to "Look Ahead—Look South" for greater industrial opportunities.

You benefit. We benefit. Because we are all part and parcel of our great and growing Southland... all sharing in its development... and all working together to bring even greater growth and progress in the years that lie ahead.
