At a meeting of the Board of Directors of the Fair Association last week it was agreed by unanimous vote to start construction of a new building on the fair grounds immediately after the fair this year.

The building is to be at least 250 feet long, and wide enough to accommodate a large permanent roller skating rink. The management of this skating rink will be under the supervision of the recreational director and the income realized will go to support that program.

A craft shop also will be included in this building, equipped with the necessary tools whereby boys and girls and men and women can go to follow up their hobbies and learn by doing, says G. H. Farley, county agent. A small auditorium is to be included to accommodate small groups for demonstrations, lectures and educational meetings.

During fair week this building will be used for fair exhibits. All the rest of the year it will be utilized as an activity center for both the youth and adults of Cherokee County.

Future plans include the building of a swimming pool, the enlargement of the bleachers for football and baseball, and a full-time, year-round recreational director.

## Mass X-Ray Survey To Begin August 5

Mobile X-ray Units will begin taking X-ray pictures of the chest area on August 5 and continue in the Cherokee, Clay, and Graham Health District until September 3.

This chest X-ray service is made possible by the District Health Department, county commissioners and tuberculosis committees of Cherokee, Clay and Graham counties in conjunction with the North Carolina State Board of Health.

All organizations encourage everyone 15 years of age and older to take advantage of this opportunity now available for the first time.

Dr. Donlan, district health officer, stated, "Children over four and under fifteen who have been contacts of cases of tuberculosis, may be referred for an X-ray at the Mobile Unit by family doctor or the Public Health Nurse. Children not referred will not be X-rayed because there is little tuberculosis among children of these

ages. Tuberculosis is a disease of adult life, and it continues into old age. Therefore, adults should be X-rayed every year."

The health officer also stated, "If tuberculosis is present, a chest X-ray will usually show it even before there are any symptoms. The great advantage of finding a case of tuberculosis early is that it can be cured in a comparatively short time and there is little danger of its spreading to other members of the family and friends."

Dr. Donlan said, "Conditions, such as a cyst or tumor, cancer of the lung or enlarged heart, may also be detected by the X-ray. Everyone will receive a written report from his X-ray after two or three weeks."

Dr. Donlan urges everyone to remember the important facts: it is free; no undressing is required; it takes only two minutes; and everyone receives his written report.
