Multiple Sclerosis is a neurological disease affecting the brain and spinal cord. It is not contagious nor is it a mental disease. It has been called the "mysteriouscrippler of young adults" because it is usually first diagnosed between the ages of 15 and 50.

Technically, the disease attacks the myelin sheathing of the central nervous system, destroying it in patches. The myelin sheath acts much like the insulation around telephone wires, and when it is destroyed, the flow of nerve impulses to and from the brain is interrupted or distorted. The resultant symptoms from this destruction of myelin can be: paralysis, double vision, bladder or bowel problems, loss of balance, loss of coordination, and speech and hearing difficulties, among others. There are more than 500,000 people in American with MS.

### A CORRECTION CONCERNING ED JOHNSON POLITICAL ADS...

In last week's issue of the Carolina Indian Voice, Oct. 21, 1982, three political ads appeared, each 1/4 page and headed "Ed Johnson, what will you do for Indian people..." "Who does Charlie Rose listen to in Robeson County..." and "What is Charlie Rose doing about Indian employment?" etc. etc.

The Carolina Indian Voice inadvertently neglected to list the political committee paying for and authorizing the ads.

The ads should have read "A Political Ad" and/or "Paid for an authorized by Ed Johnson for Congress Committee." We apologize for this omission and make this correction in good faith, noting no opinion was meant or inferred by said omission of authorizing committee.
