If there are any further questions; please call (919) 733-5027.

## **EXTENSION SCENE**

### by John G. Richardson

**Robeson County** 

A few days ago Rick Gregory with the North Carolina Department of Agriculants and their continuing spread in Robeson County. While those individuals down in the southeastern part of Robeson have long been tolerating fire ants, the folks around Maxton and above St. Pauls are just beginning to have the dreaded opportunity to deal with these problem ants. For those individuals who are unfamiliar with fire ants, these ants are much larger than the normal black ant that is usually a problem in homes, and the fire ant is sometimes mistaken for the common pith ants that are native to this area. The major difference be-

tween other ants and the fire ant is that fire ants congregate in extremely large numbers in mounds that sometimes can reach 18 inches in height above the soil surface. Also, their temperament is such that when their mound is disturbed, they respond in large numbers and are quite vicious and fully prepared to bite the offending subject. Since I am originally from the southern part of Columbus County, I have often had to tolerate fire ants as I have visited my family. And regretfully, I have several tiny scars on my hands that are the telltale results of fire ant bites.

Since fire ants are quite capable of administering extremely uncomfortable bites. it is usually the desire of anyone who encounters them to make every attempt to eradicate them from the general area. However, once established, they are quite difficult to eradicate, and perhaps the best method of approach is to attempt to ' control them.

In a systematic fire ant cation of active fire ant mounds and be sure the ants are actually fire ants. Second, only use an insecticide recommended for fire ant control. Insecticides that are presently labeled for fire ant.

**Extension Chairman** control in North Carolina include: Diazinon, at one ounce per one gallon of water; ture stopped by to discuss fire Dursban, also at one ounce per one gallon of water; and Amdro, at five tablespoons per mound. Thirdly, for liquid insecticides use a sprinkle spout watering can using one ounce of insecticide (Diazinon or Dursban) per one gallon of water as recommended, and for the granular or bait-type insecticides, spread the material over the mound and up to two feet away from the ground. Fourth, do not disturb the mound before treatment. Simply prepare the insecticide at the recommended rate and approach the mound quietly, then apply the insecticide as suggested, and check the mound frequently for ant activity. Fifth, apply the insecticide at the optimum temperature. Fire ants prefer temperature near 72 degrees F with a range from 60 degrees to 80 degrees and are best controlled in that tem-

> ants are exterminated. While it is important to always follow label directions when applying any insecticides, for best results when applying liquid insecticides to fire ant mounds, sufficient amounts of water should be used to thoroughly wet the mound that is being treated.

perature range. Sixth, make

sure that fire ant mounds are marked so they can be

avoided by children until the

Based on our experience over the past few years. retreating of the mounds may be necessary a few weeks following the first application of the recommended chemicals, since none of the materials have shown outstanding effectiveness when used for fire ant control. However, when used consistently and properly, they do a relatively good job. But, when dealing with fire ants, it is important available for their eradication

\*Payment may be adjusted due to a negative amortization cap. During the last ten years of your loan, the amount of your payment change

Equal Housing Opportunity

### Before you buy your home, take a closer look at our FirstRate Mortgage.

Look before you leap into what appears to be a lowinterest mortgage loan. Monthly payments on such loans may be attractive in the first year, but after that, escalating interest rates could send them right through the roof.

That's why we encourage you to come into First Union for a thorough discussion of home financing in general and for a look at the advantages of a FirstRate Mortgage. A few of its benefits are highlighted here, but the way to determine what's best for you is to come in, sit down and talk.

interest rates are based on a index that allows you to take advantage of reduced interest costs when rates decline.

### A great way to finance your second home.

Whatever your style—a chalet in the mountains or a place at the beach—FirstRate is a great way to get just what you want in a second home.
