

to prevent any injury which might arise from the want of such attestation, it will be proper that the municipal authority should certify the non-existence of a board of health, whenever no such institution exists in the port, and that when they (the town or city officers or corporation) are ex-officio health officers, they should also certify the same.

Whenever it can be done, it will be useful to obtain a certification, of the facts, stated in the bill of health, by the consul or agent of the country to which the vessel may be bound, and from a late publication, this certification seems particularly necessary in respect to vessels destined for Spain. This attestation, it will be the interest of the owners of vessels to procure.—But in those ports where the distance from the place of residence of the proper consul, may prevent its being obtained, you may, on application of the party, certify that there is not within the district, county or state, as the case may be, any consul or agent for that country to which the vessel is bound.

As you must be sensible that there is no law by which to compel the masters of vessels to take certificates of health, the probability is that in times of sickness they will refuse to receive them. In such case it becomes your duty to inform them that the regulations have been adopted solely for the benefit of commerce, and that their arrival in foreign parts without these certificates, will be regarded as presumptive evidence of the existence of infectious disorders in the ports from whence they cleared out.

The Prohibition, by whose directions I addressed you on this subject, entertains no doubt of your readiness in carrying into effect regulations, which may, in many instances, relieve our vessels from very injurious and useless detentions.

I am, with consideration,
Sir, your obedient servant,
ALBERT GALLATIN.

The Machine will require no manual assistance unless the stream of air be considered too heavy or too light, when moving an index will immediately remedy the defect.
