Roxboro School Teachers Discuss Role Of Math In Developing Systematic Thinking Among Pupils

ROXBORO
The Mathematics Department of the Person County High School presided at the regular monthly professional meeting, Wednesday, January 27. The topic for the year: "Meeting the Challenges of the Growth and Development of the Child" was approached from a mathematical standpoint by this group. The chairman of the Mathematics group, Mrs. L. W. Crumby, opened the discussion with: "Education in itself is a challenge, and when an individual or a group of individuals tries to get along without math, he falls short of his proper contribution to a democratic society, or forfeits any claims to being civilized people." Mrs. Crumby also stated that, a totally developed child makes a responsible citizen, one who is capable of determining his own

acts, and the schools must supplement the home in the training of our youth to fit into and improve our democratic society. The second speaker, Mrs. M. F. Compton who dealt with the social and physical development of the child, said that mathematics should develop in the pupil the ability to apply quantitative procedures effectively in social situations and in life outside of

school. She also stated that if our democracy is to survive, it is essential that the majority of our (Please turn to Page Seven)

The Public Can Choose with Confidence

IN the smoker's interest Liggett & Myers Tobacco Company has maintained for 4 years an intensified, larger scale diversified research program. A half-million dollar 30-ton machine, the world's most powerful source of high voltage electrons, designed solely for our use has tested tens of thousands of cigarettes. This program has already given to us direct and significant information of benefit to the smoking public.

Our consultants include Arthur D. Little, Inc. of Cambridge, Massachusetts—which Business Week Magazine says is "one of the largest and most reputable industrial research organizations in the country"—and eminent scientists from leading universities.

For more than thirty years we have used research day in and day out learning about tobaccos and cigarettes in the public's interest.

Continuously we and our consultants have analyzed, experimented with and smoked all kinds of tobaccos... especially Southern Bright, Burley, Maryland and Turkish cigarette tobaccos.

Our own cigarettes and competitive brands have been submitted to the most exacting scientific scrutiny including thousands of analyses of millions of pounds of tobaccos.

From all these thousands of analyses, and other findings reported in the leading technical journals, our Research Department has found no reason to believe that the isolation and elimination of any element native to cigarette tobaccos today would improve smoking.

Today the public can confidently choose from a variety of brands—by far the best cigarettes ever made by the tobacco industry.
